Every screen, ready for a modern design

The prototype works end to end. A member applies; the society pools ten to twenty approved loans; the federation sanctions a wholesale tranche; members repay every month; and every payment is split between the federation and the society, in double-entry books. Every screen was built for correctness, not for looks. This brief walks through the whole app so it can be given one modern, coherent design. For each screen it covers where it is, who uses it, what it is for, the flow, what is on it today and what we need designed. We will rebuild each screen to your design. No behaviour, figure or rule changes.

Prepared 29/10/2026. Screenshots come from the local build at 1440px (desktop) and 768px (tablet), on the demo date, Thursday 29 October 2026. All data is mock and every name is fictional. Unless a caption says otherwise, the view is the secretary of Annapurna Credit Society in scenario A, the clean run. Scenarios B (delinquency) and C (prepayment and recovery) appear where they show a state that A cannot.

The product in one paragraph

Pragati Apex Credit Federation (PACF) lends wholesale to its member credit societies at **9.5%** a year. A society, such as Annapurna, Gramodaya or Sahakar Mitra in Karnataka, takes applications from its members and pools ten to twenty approved loans into one funding request. Once the federation sanctions it, the society draws the tranche and lends to each member at **11.5%**. Members repay a fixed monthly instalment (EMI). Each payment is split: wholesale interest and all the principal go on to the federation at the next monthly remittance, and the **2.0%** spread stays with the society as its margin. Late members cost the society cash, not margin. Principal held back from the federation costs margin for good.

Who sees what

- **Society Secretary:** everything in their society. Decides loans above ₹50,000, builds and submits pools, draws down, disburses and remits.
- **Loan Officer:** takes and appraises applications, decides loans up to ₹50,000, and records payments.
- **Auditor:** every society screen, read only.
- **Apex Officer** (the federation): exposure across societies, funding requests, review and sanction, and society records.
- **Member:** their own loans, schedule and payments, at the retail rate only. Nothing about wholesale pricing or margin reaches them.

Keep, whatever the look

- Money in rupees with Indian grouping and two decimals (₹5,35,169.01), tabular figures, right-aligned in tables. Negative amounts look negative. Rates read “11.5% a year”; dates “29 Oct 2026”.
- Every amount that is a link stays a link. Any dashboard figure opens the journal lines behind it in at most two clicks.
- Words that explain numbers are content, not decoration: the margin explanation, the payment split preview, and the refusal messages the engine returns.
- The demo bar must never look like part of the product. Today it is an amber strip.
- Colour never carries meaning alone: every state also has a word or an icon.
- Desktop first, working down to tablet width (768px). Keyboard and screen reader use: dialogs trap and return focus, a skip link leads to the page, and focus moves to each new page.
- Light and dark. Both token sets exist today, and dark follows the system setting.

Built with

React and Tailwind 4, with colour tokens in oklch; Radix for dialogs, menus and tabs; lucide icons; the system font. You are free to propose a typeface, an icon set, a palette, radii and elevation. We will express them as tokens, so every screen picks them up at once.

How to read the tags

Redesign works today; give it the modern look and keep its content. New pattern missing, or solved differently on several screens; design it once and we will reuse it. Question we need a rule or a yes / no, not a full design.

At a glance — 36 items

#	Screen or part	Address	What needs designing	Tag
FOUNDATIONS				
F1	Visual language	—	Type scale, palette, spacing, radii, elevation, icons; light and dark	New pattern
F2	Colour meanings	every screen	One meaning per colour: on time, due, late, at risk; federation and society; demo	Question
F3	Money and numbers	every screen	Amounts, rates, differences, negatives, headline figures	Redesign
F4	Small charts	dashboards, reports, dialogs	Split bar, ageing bar, pool band, limit bar, repaid bar	New pattern
F5	Status pills	every list	Nine families of statuses, each with a word	Redesign
SHELL AND DEMO CONTROLS				
S1	App shell	every page	Sidebar, page header, breadcrumb, tablet menu	Redesign
S2	Demo bar and invariants	every page	Role, society, clock, scenario, walkthrough, invariants panel	Redesign
S3	Walkthrough panel	every page	The guided-tour card	Redesign
S4	Loading, empty, refused, not found	every page	One set of states for the whole app	New pattern
SOCIETY — SECRETARY, LOAN OFFICER, AUDITOR				
D1	Dashboard	`/dashboard`	Position, earnings, what is due, ageing; every figure a link	Redesign
M1	Member register	`/members`	Search, totals, status pills per member	Redesign
M2	Member profile	`/members/:id`	Facts, loans, applications, “new application”	Redesign
A1	Application queue	`/applications`	Six stage tabs, who-decides pill	Redesign
A2	New application	`/applications/new`	Form with a live EMI quote	Redesign
A3	Appraisal and decision	`/applications/:id`	Appraisal form, repayment burden, approve / reject, officer limit	Redesign
P1	Pools	`/pools`	List with federation outcome	Redesign
P2	Pool builder	`/pools/new`	Pick members, live economics, member band	Redesign
P3	Pool detail and re-scope	`/pools/:id`	Decision card, history, re-scope dialog	Redesign
T1	Funding	`/tranches`	Tranches with next remittance	Redesign
T2	Tranche detail	`/tranches/:id`	Next remittance, history, remit and disburse dialogs	Redesign
K1	Collections desk	`/collections`	Due and overdue lists, payment drawer with split preview	Redesign
L1	Loan detail	`/loans/:id`	Schedule, receipts with their split and journal entry	Redesign

G1	General ledger	`/ledger`	Journal and trace, T-accounts, trial balance	Redesign
G2	Statements	`/ledger/statements`	Income statement and balance sheet by period	Redesign
R1	Reports	`/reports`	Margin, ageing, collection efficiency, pool performance	Redesign
X1	Settings	`/settings`	Policy, reconciliation, scenarios, walkthroughs	Redesign
FEDERATION — APEX OFFICER				
E1	Exposure	`/apex`	Totals, limit used per society, members late	Redesign
E2	Funding requests	`/apex/requests`	Queue of submitted pools, oldest first	Redesign
E3	Review and sanction	`/apex/requests/:id`	Terms editor, track record, composition, decline	Redesign
E4	Societies	`/apex/societies`	Limits, headroom, punctuality, members late	Redesign
E5	Society detail	`/apex/societies/:id`	Tranches, remittance punctuality, pools	Redesign
MEMBER				
U1	My loans	`/me`	What I owe, next instalment	Redesign
U2	My loan	`/me/loans/:id`	Schedule and payments, member's words	Redesign
QUESTIONS FOR THE WHOLE APP				
Q1	Table density	every table	Compact or comfortable; up to 10 columns	Question
Q2	Phone	member screens	Should members get a phone layout?	Question
Q3	Languages	every screen	Room for Kannada labels, 30–50% longer	Question

Redesign: 29. New pattern: 3 (F1, F4, S4). Question: 4 (F2, Q1–Q3). The next page shows how the screens connect, from application to remittance.

How the screens connect

ORIGINATION Apply (A2) → Appraise (A3) → Decide (A3, officer up to ₹50,000) → Pool (P2) → Submit to the federation → Begin review (E3) → Sanction or decline (E3) → Re-scope if sanctioned short (P3) → Draw down and disburse (T2)

SERVICING Instalments fall due (clock) → Record payments (K1) → Each payment split between federation and society (K1, L1) → Remit to the federation on the date (T2) → Margin kept (T2, R1)

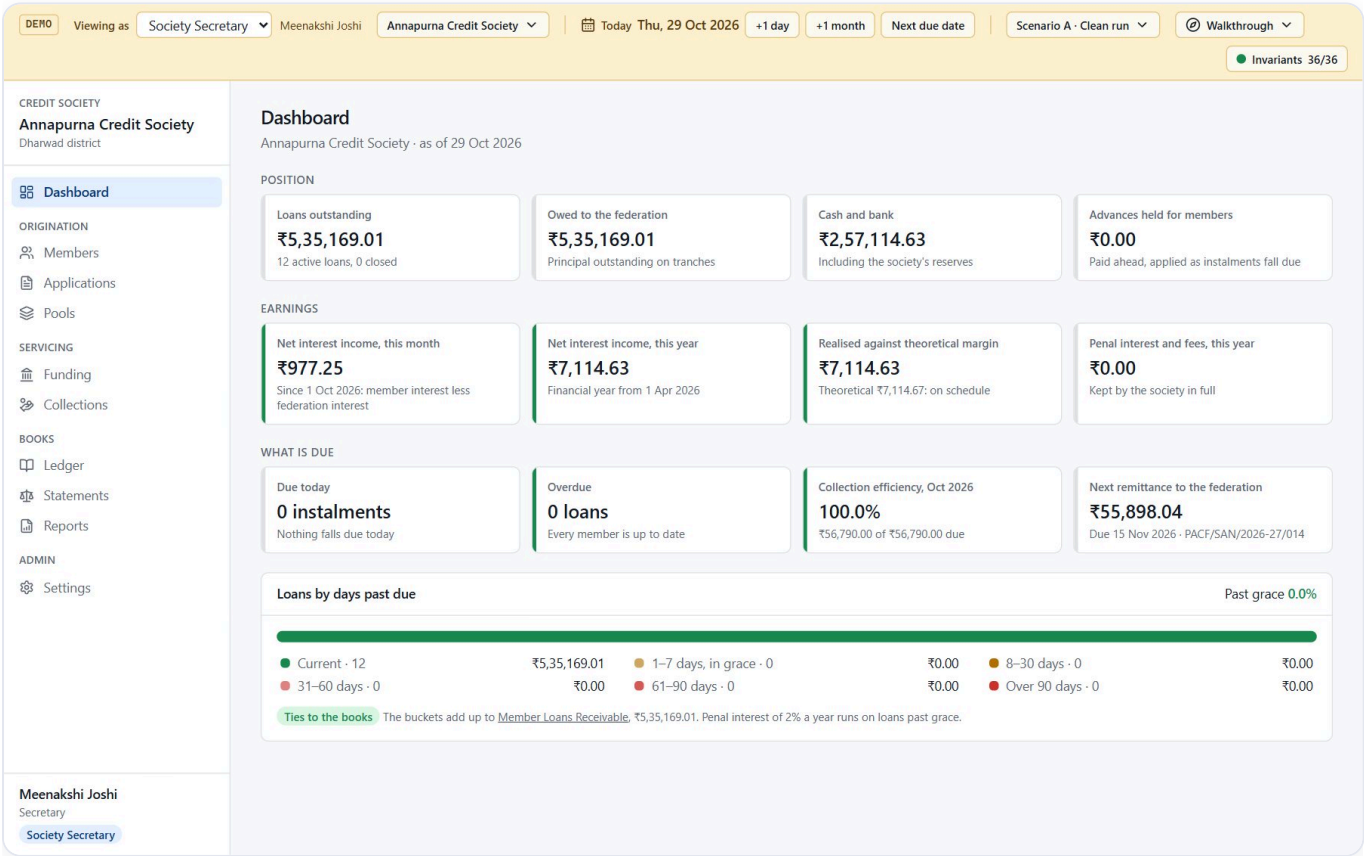

BOOKS Every money movement posts a balanced journal entry → Dashboard figures (D1) open their journal lines (G1) → Statements (G2) and reports (R1) are folded from the same journal

Three ideas recur on almost every screen and should look the same everywhere:

- **The split.** Any amount members pay divides into “to the federation” and “kept by the society”. It shows as a two-colour bar in the payment drawer (K1), the pool builder (P2), the pool economics (P3, E3) and the tranche margin (T2).
- **Theoretical against realised.** What the schedules promised against what the books show, with the difference explained in words (D1, R1).
- **Traceable figures.** A figure that is a link opens the journal lines that add up to it. Today this is a plain underline on hover. It needs a consistent, quiet affordance (F3).

THE DEMO, IN BRIEF

An amber demo bar sits above every page (S2). It switches role and society, moves a simulated clock (+1 day, +1 month, next due date), loads one of three prepared scenarios, starts a guided walkthrough, and shows a green dot while all 36 accounting checks pass. Advancing the clock never posts anything; only people record payments and remittances.

The app today: demo bar, sidebar, page header and the society dashboard. Scenario A, 29 Oct 2026.

F1 Visual language

New pattern

Every screen · today's tokens live in `src/index.css`

Today the app is neutral and dense, for screens that are mostly numbers: cool greys, one blue accent (primary), three status colours (good, warn, bad), soft tints of each, and an amber strip (demo) reserved for the demo bar. The system font throughout, lucide line icons, 8px radii, 1px borders, almost no shadow. White cards on a very light grey page.

Part	Today
Type	System UI font; page title 20px semibold; card titles 14px semibold; body 14px; labels 12px; tile figures 20px semibold, tabular
Surfaces	Page background off-white; cards white with a 1px border; muted grey for table heads and inputs
Components	Button (primary, outline, ghost, subtle; md, sm, icon); badge (neutral, info, good, warn, bad); card; tabs; dialog (440–720px); right-hand sheet (512px); native selects and inputs; table; stat tile with a coloured left edge
Icons	lucide, 16px, in the sidebar, buttons and the demo bar
Dark	Every token has a dark value; the app follows the system setting

DESIGN

- A modern visual language for a finance tool used all day by society staff: typeface (with good tabular figures and a ₹ glyph), type scale, palette, spacing, radii, elevation and an icon set.
- Light and dark versions of every token.
- How cards, tiles and tables sit on the page: flat with borders, soft shadows, or layered surfaces?
- Native selects are used in forms and filters today. Should they become custom selects, or stay native for speed and accessibility?

F2 One meaning per colour

Question

Every screen

The same few colours carry different ideas in different places. Green means both “on time” and “money the society keeps”. Amber means “due today”, “in grace”, “re-scope needed” and “awaiting decision”. Blue is the brand, “informational” pills, and the federation’s share in every split bar.

Idea	Where	Colour today
Paid, on time, balanced, ties to the books	Schedules, remittances, trial balance, ageing	green
Kept by the society (margin, spread)	Split bars, margin figures, dashboard tiles	green
To the federation (wholesale share)	Split bars, pool economics	blue (brand)
Due today, in grace, needs appraisal, awaiting decision	Collections, applications	amber
Re-scope needed, sanctioned short, rounding gap	Pool detail, tranche, margin	amber / grey
Late, overdue, past grace, at risk, declined, rejected	Collections, ageing, apex	red
Ageing buckets: current → over 90 days	Dashboard, reports	green → amber → light red → red
Officer can decide / Secretary decides	Applications	grey / blue
Demo controls	Demo bar, scenario menu	amber strip

QUESTION

- A short colour rule every screen follows, with an icon or word for each state so colour alone never carries meaning.
- Should “to the federation” and “kept by the society” have their own two colours, apart from the status colours? They appear together on at least six screens.
- The ageing scale (current, in grace, 8–30, 31–60, 61–90, over 90 days): a sequential palette that still reads in greyscale and for colour-blind users.

F3 Money and numbers

Redesign

Every screen · one component, MoneyText, renders every amount

Kind	Example today	Rule
Amount	₹5,35,169.01	Indian grouping (lakhs, crores), two decimals, tabular
Negative	-₹596.81	Minus sign and the “bad” colour
Headline figure	**₹3,199.53**	Stat tiles: 20px semibold
Rate	11.5% a year · 2% spread	Trailing zeros dropped
Share	78.8% · 31.9%	One decimal for efficiency and at-risk shares
Difference	-₹3,915.14 apart	Muted when within ₹1 (rounding), coloured otherwise
Traced figure	₹977.25	A link to its journal lines; underline on hover only
Reference	`PACF/SAN/2026-27/014` · `loan_001`	Sanction, pool, receipt and loan references appear as plain text

DESIGN

- Figures in tables, tiles and running text: weight, size steps and the ₹ sign’s treatment. Should paise be visually quieter than rupees in headline figures?
- A visible but quiet sign that a figure opens its journal lines: an icon on hover, a dotted underline, or a tile footer such as “View lines →”?
- References and internal ids (`loan_001` , `app_070` , `ANN/R/00073`): show them, style them as quiet codes, or hide internal ids from staff?

F4 Small charts

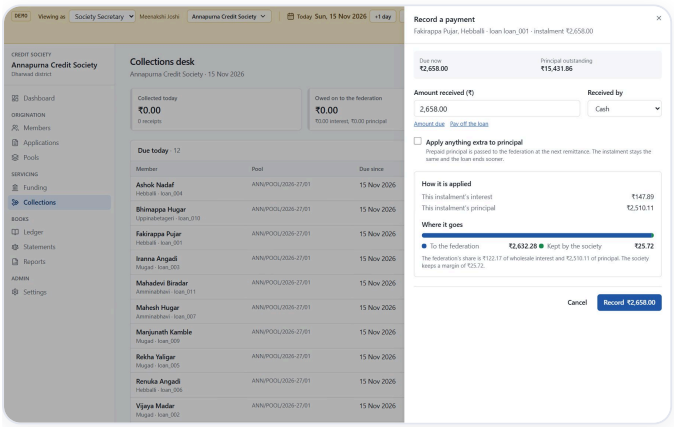

New pattern

Dashboards, reports and dialogs · five small bars, each built separately today

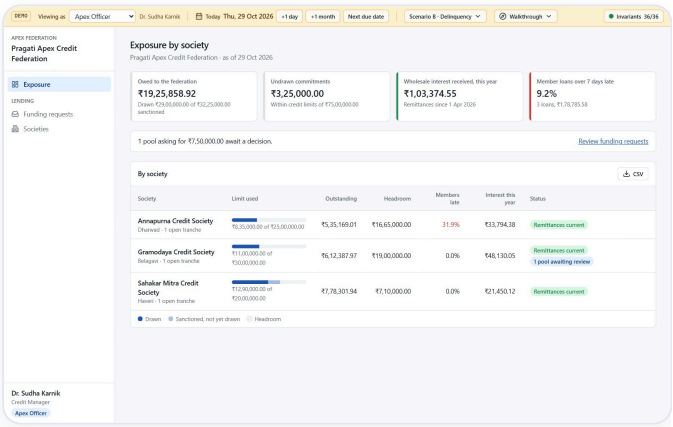

Chart	Shows	Where
Split bar	To the federation against kept by the society (and held as advance)	Payment drawer (K1), pool economics (P2, P3, E3), loan receipts (L1)
Ageing bar	Principal outstanding by days past due, six buckets, stacked	Dashboard (D1), ageing report (R1)
Member band	Members in the pool against the 10–20 band	Pool builder (P2)
Limit bar	Drawn, sanctioned-not-drawn and headroom against a credit limit	Federation exposure (E1)
Repaid bar and purpose bars	Share of principal repaid; amount by loan purpose	Pool performance (R1), review (E3)

DESIGN

- One family of small charts with shared spacing, labels, legends and empty states. A legend inline, under the bar, or on hover?
- Month-by-month trends (margin, collection efficiency) are tables today. Is a sparkline or small bar chart wanted on the dashboard and in reports?
- Every chart needs a text equivalent for screen readers; today each bar has an aria label listing its parts.

Split bar in the payment drawer (K1).

Limit bars on the federation's exposure (E1), scenario B.

F5 Status pills

Redesign

Every list · one Badge component in five tones

Family	Words today
Loan	Active · Repaid · Foreclosed · Written off
Instalment	Paid · Upcoming · Due today · Part paid · N days late
Collection	Due today · N days late, in grace · N days late · Upcoming
Application stage	Needs appraisal · Awaiting decision · Ready to pool · In a pool · Disbursed · Rejected
Who decides	Officer can decide · Secretary decides
Pool	Being built · Ready to submit · Submitted · Under review · Sanctioned · Declined · Disbursed · Servicing · Closed
Tranche	Sanctioned · Part drawn · Drawn · Servicing · Closed · Defaulted
Remittance	On the day · N days late · Short · Overdue · Due today · Not due yet
Books	Balanced · Balances · Ties to the books · Out of balance · Does not tie to the books

DESIGN

- A pill system with an icon per state family, following F2. Do lifecycle statuses (pool, tranche, application) get a stepper or progress look anywhere, or stay as pills?
- Pills that are links today (an applicant's open application on the member register, "1 pool awaiting review"): how a clickable pill differs from a plain one.

S1 App shell: sidebar, page header, tablet menu

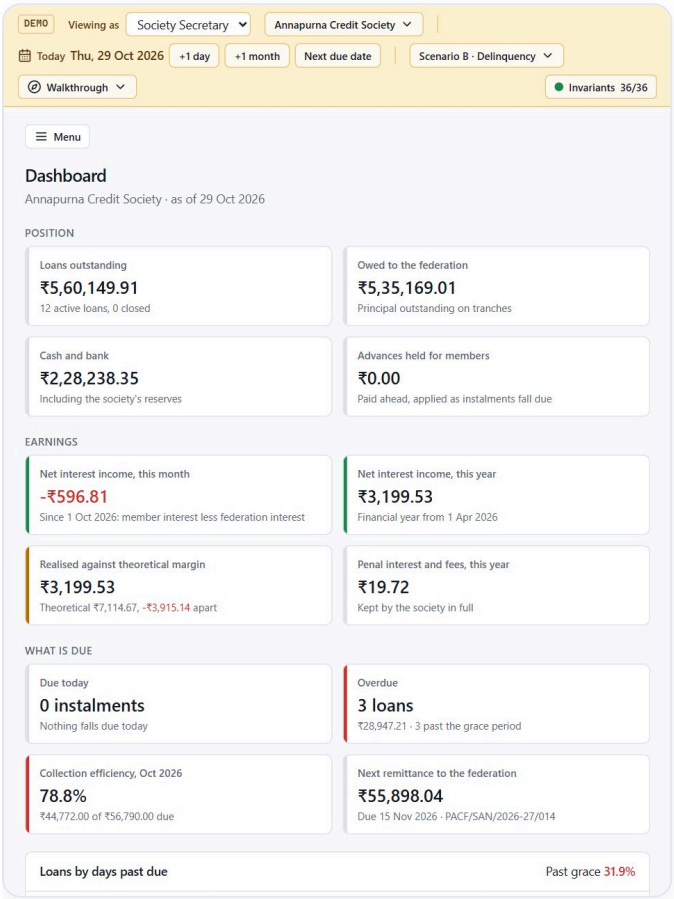

Redesign

Every page · society, federation and member tiers each have their own sidebar

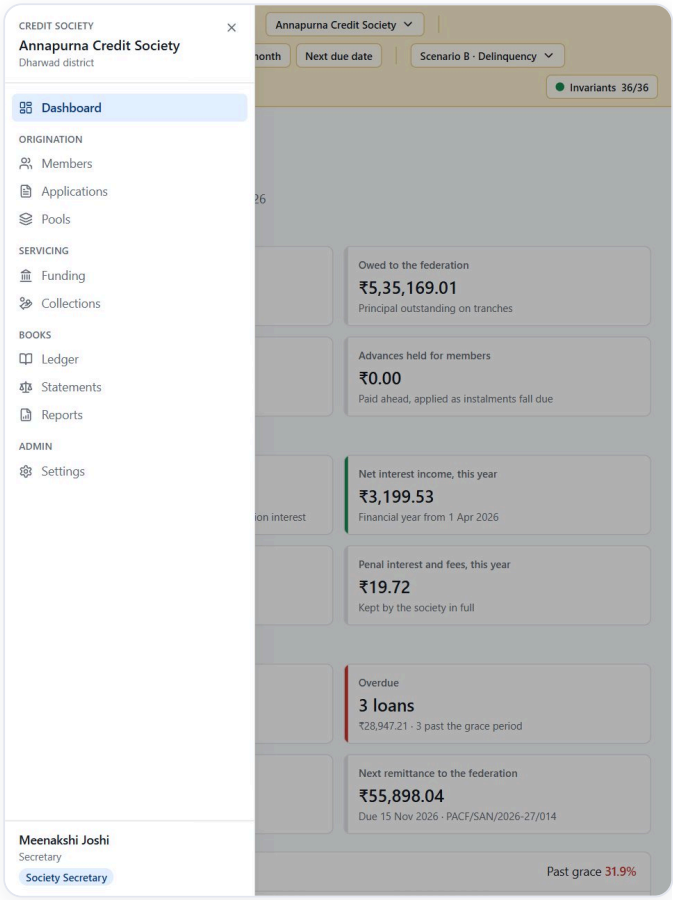

The sidebar shows the organisation at the top (“Credit society · Annapurna Credit Society · Dharwad district”, or the federation), grouped navigation (Origination, Servicing, Books, Admin for a society; Lending for the federation), and the signed-in person with a role pill at the bottom; the auditor also gets “Read only”. Below 1024px the sidebar folds into a **Menu** button that slides it in from the left. Every page has a header: title, a one-line description, actions on the right, and on detail pages a breadcrumb above.

DESIGN

- The sidebar for each tier: how the organisation, the groups and the person sit; collapsed (icon-only) on smaller laptops?
- The page header pattern: title, description, breadcrumb, primary and secondary actions, and the status pill on detail pages (pool, tranche, application).
- Tablet: the Menu button sits at the top of the page content today. Should there be a proper top bar?

Tablet, 768px: the Menu button and two-column tiles. Scenario B.

Tablet menu open.

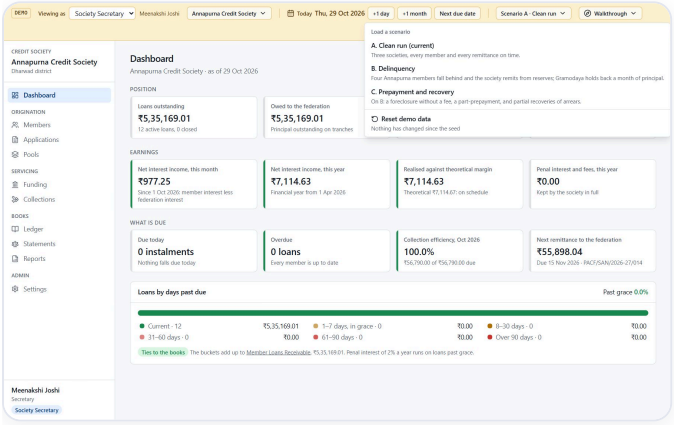

S2 Demo bar and invariants panel

Redesign

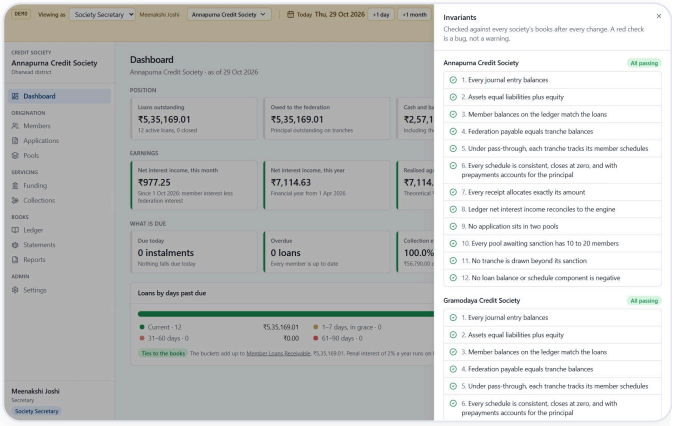

Every page · demo only; must never look like the product

- **Viewing as**: the five roles. **Society** menu: whose books, for society roles.
- **Today**: the simulated date, +1 day, +1 month, Next due date.
- **Scenario** menu: A Clean run, B Delinquency, C Prepayment and recovery, and Reset demo data.
- **Walkthrough** menu: three guided tours (S3).
- **Invariants**: a green dot and “36/36”. It opens a side panel listing the twelve accounting checks for each society, each passing or failing with detail.

> **DESIGN**
>
> - The bar now wraps to two rows even at 1440px. A compact single row, a collapsible drawer, or a floating pill that opens a demo panel?
> - How it stays clearly “demo” in light and dark while looking as finished as the rest.
> - The invariants panel: a list of twelve checks per society. A summary first, details on demand?

Scenario menu open.

Invariants panel: twelve checks per society.

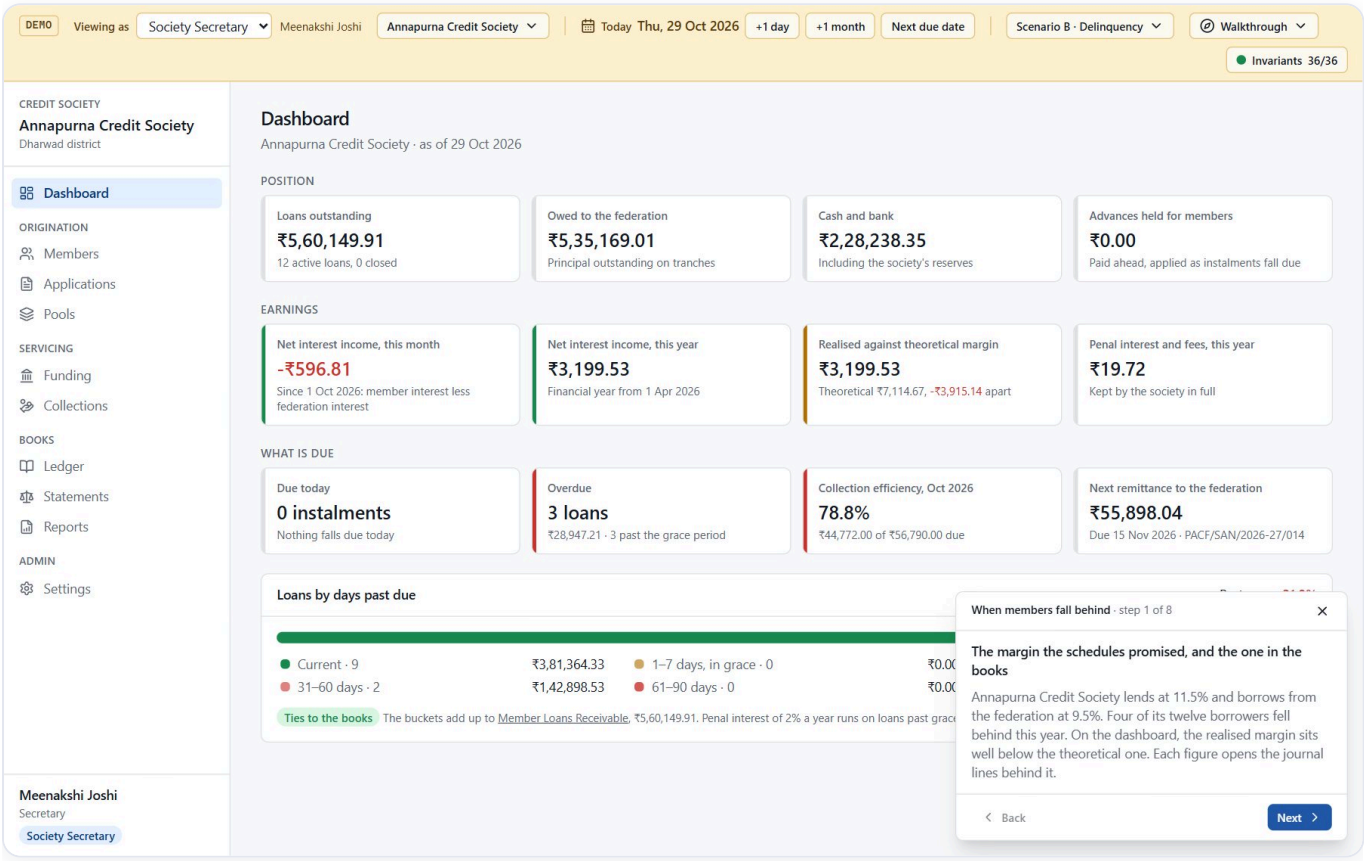

S3 Walkthrough panel

Redesign

Every page · started from the demo bar or Settings

Three scripted tours: “When members fall behind” (8 steps, scenario B), “Prepayment and recovery” (4 steps, scenario C) and “A month in the life of a pool” (5 steps, scenario A). Each step loads its scenario, person and screen, then says what to look at; nothing is clicked for the user. The card floats bottom right with Back, Next and Finish, and “step N of M”.

> **DESIGN**
>
> - The tour card: size, position, and whether it points at the part of the screen it describes (a highlight or spotlight).
> - The card covers the bottom-right of the page today, over the ageing card. Dock it, or let it be dragged or minimised?

Step 1 of the delinquency tour over the scenario B dashboard.

S4 Loading, empty, refused and not-found states

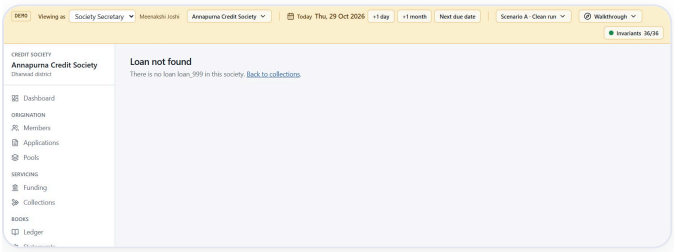

New pattern

Every page · every read waits 150–400ms, like a real backend

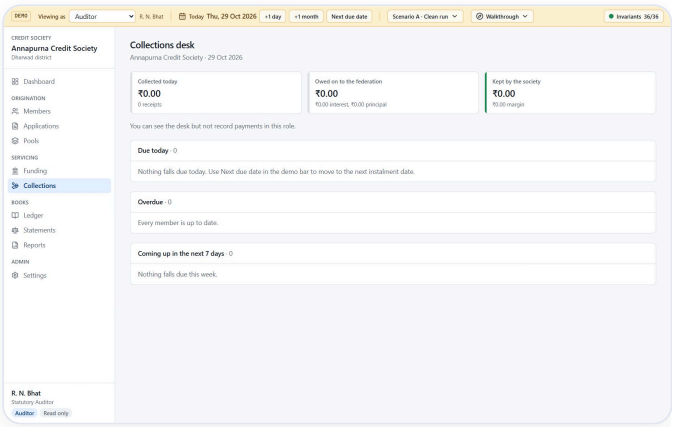

- **Loading:** grey pulsing tiles of the right count and shape.
- **Empty:** a sentence in the card (“Nothing remitted yet.”, “No loan is in this bucket.”, “Every member is up to date.”).
- **Refused:** the engine refuses anything a rule forbids and says why, in words; the dialog or form shows it in red above its buttons. A failure the screen does not handle shows as a red strip under the demo bar.
- **Not found:** a header and a link back.
- **Not allowed:** actions a role cannot take are hidden or replaced with a sentence (the auditor sees the desk, but “not record payments in this role”).

DESIGN

- One family of states for the whole app: skeletons, empty (with or without an illustration), inline errors, page-level errors, and the “you can see but not do” message.
- Success after an action: today the drawer turns into a receipt, dialogs simply close and the page refreshes. Is a toast wanted?

Not found.

The auditor on the collections desk: read only.

D1 Society dashboard

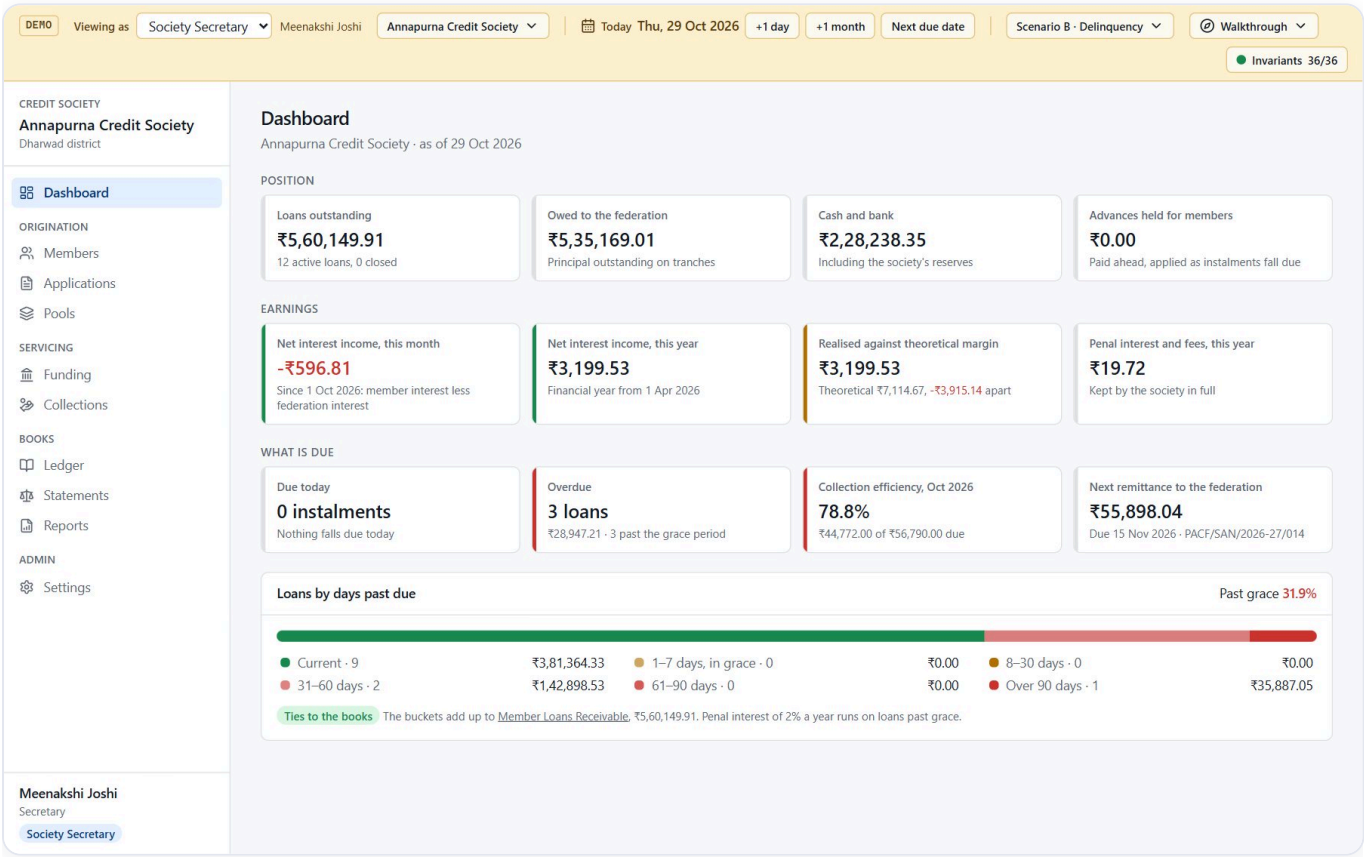

Redesign

Dashboard · `/dashboard` · Secretary, Loan Officer, Auditor · the home page for society roles

The society's position at a glance, in four groups. **Position**: loans outstanding, owed to the federation, cash and bank, advances held. **Earnings**: net interest income this month and this financial year (April to March), realised against theoretical margin, penal interest and fees. **What is due**: due today, overdue, collection efficiency for the month, the next remittance. **Loans by days past due**: a six-bucket ageing bar that ties to the books.

Every money tile is a link. Balances and earnings open the journal lines that add up to them (G1); ageing buckets, collection efficiency and margin open the report (R1), from which the lines are one more click.

> **DESIGN**
>
> - Twelve tiles and a chart. Which deserve to lead? A hero figure (realised margin, or cash) with the rest smaller?
> - Realised against theoretical margin is the heart of the product story. How to show the two side by side, with the gap and a one-line reason, right on the dashboard.
> - The tone edge on each tile (green, amber, red, grey) carries meaning today. Keep it, or move the meaning into an icon and word (F2)?
> - The "traceable figure" affordance on tiles (F3).

Scenario B: three loans overdue; net interest income negative this month, because the society paid the federation in full while members fell behind; realised margin ₹3,915 below theory; 31.9% of the portfolio past grace.

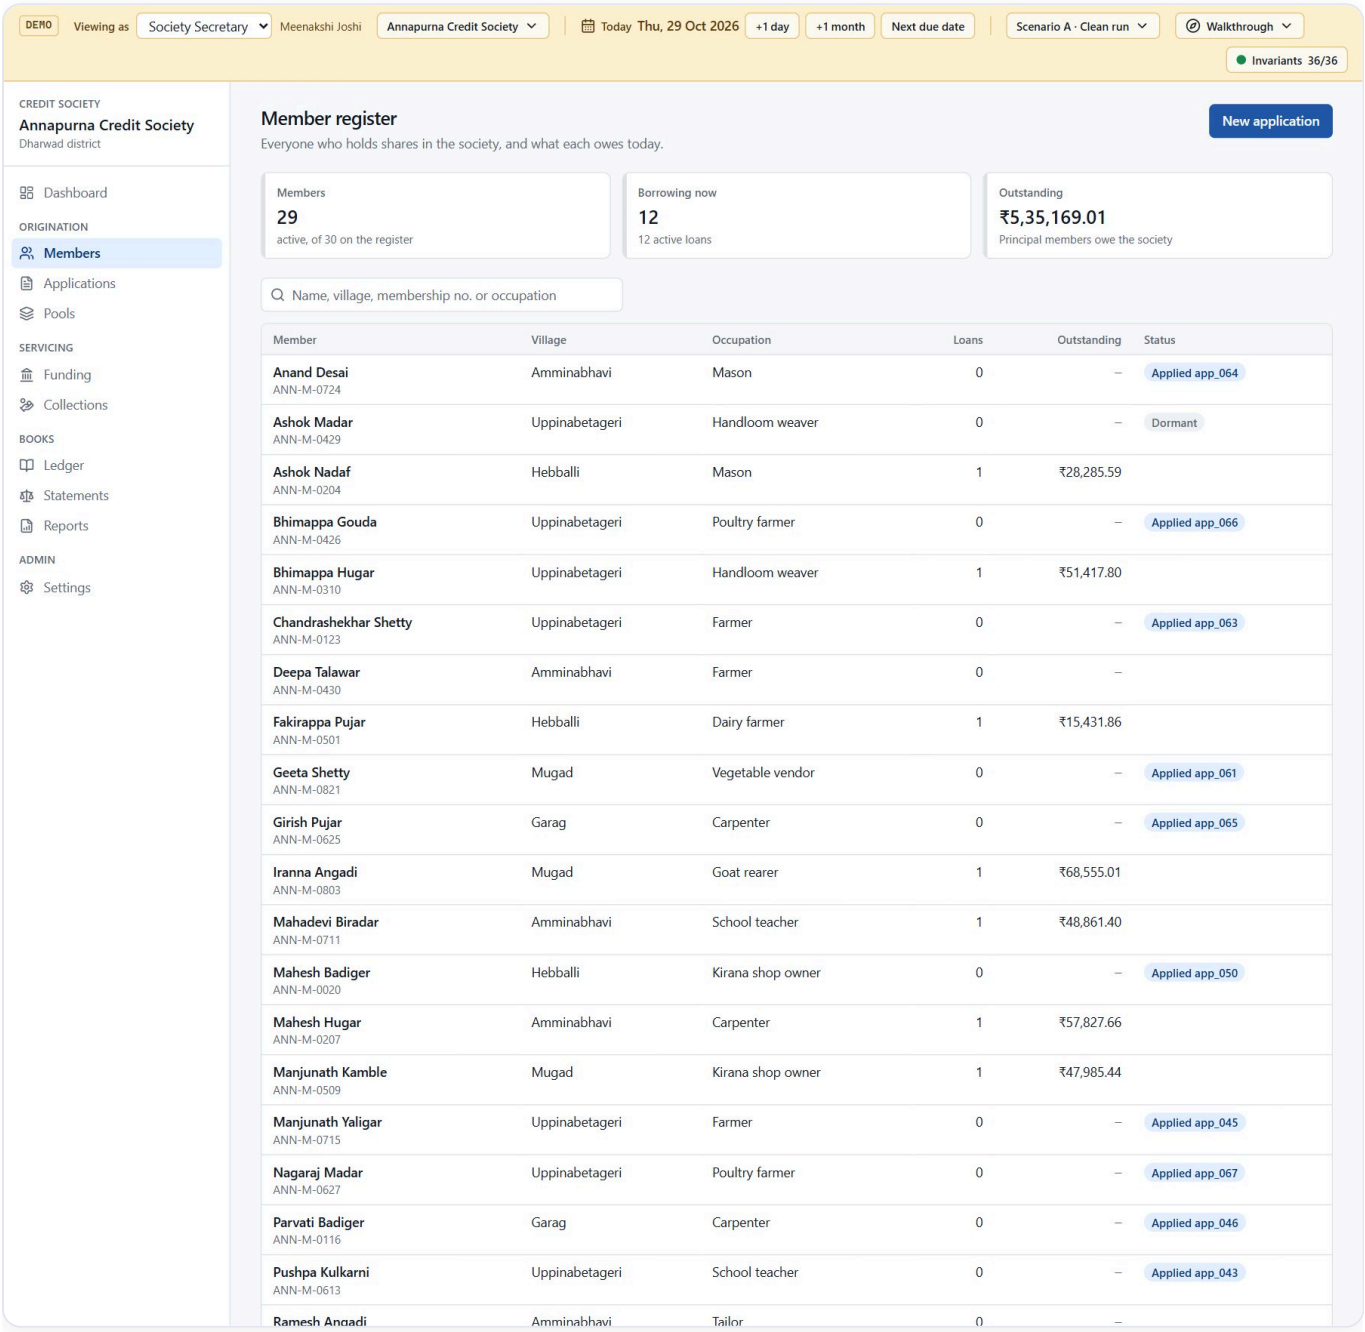

M1 Member register

Redesign

Origination › Members · `/members` · Secretary, Loan Officer, Auditor

Everyone who holds shares in the society: three totals (active members, borrowing now, outstanding), a search over name, village, membership number and occupation, and a table with village, occupation, active loans, outstanding and a status cell. The status cell can show Dormant or Exited, “N days late” or “In grace”, and a link pill to an application in progress. **New application** sits top right.

> **DESIGN**
>
> - A list of 30 here, but societies run to hundreds. Is a filter (borrowing, late, dormant) wanted beside search?
> - The status cell, which can hold up to three pills.

Annapurna’s thirty members: one dormant, and many with an application on its way, each a link.

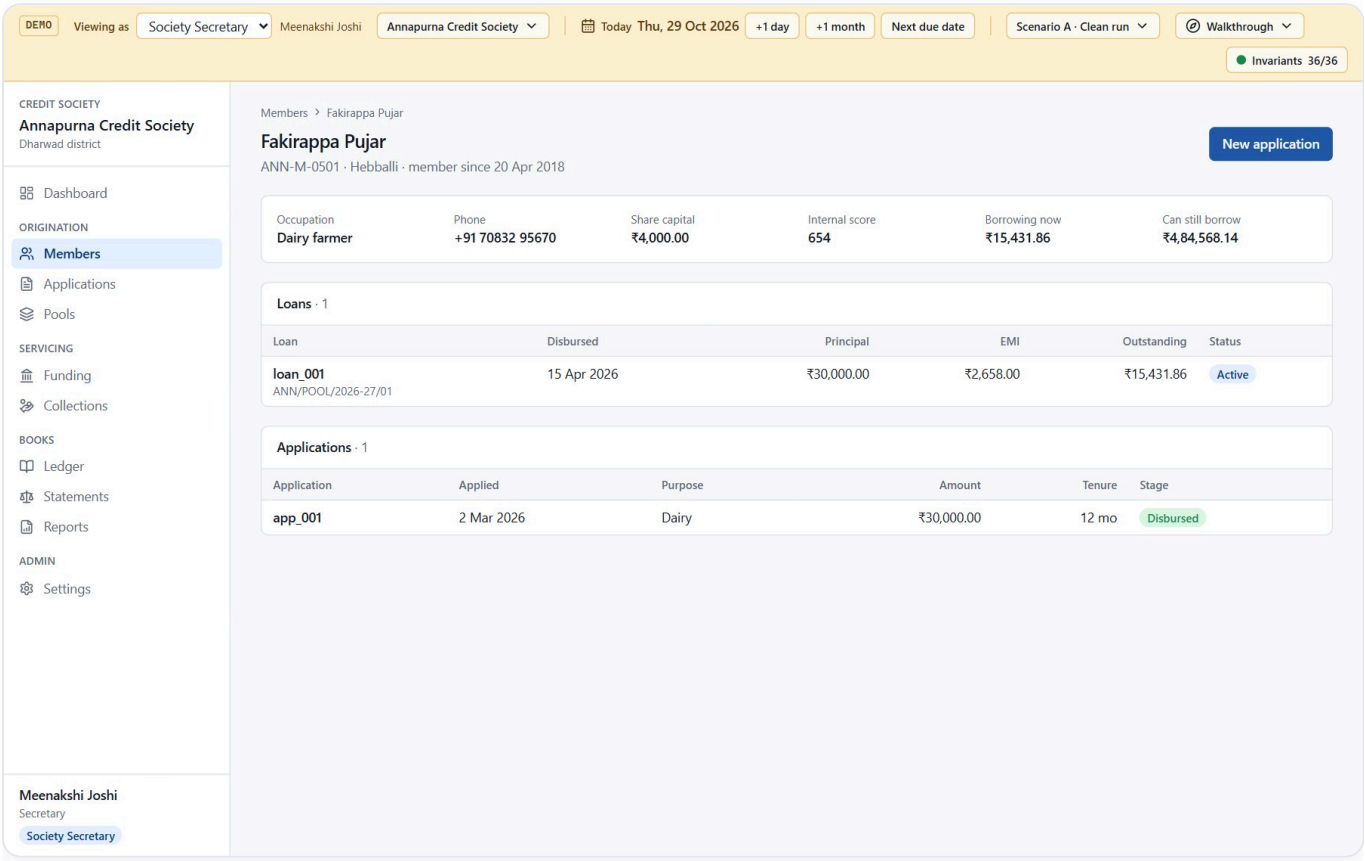

M2 Member profile

Redesign

Members › a member · `/members/:id` · Secretary, Loan Officer, Auditor

A strip of facts (occupation, phone, share capital, internal score, borrowing now, can still borrow up to the ₹5,00,000 limit per member), the member's loans with status and days late, and their applications with stage. **New application** opens the form with the member chosen; when they cannot apply, the reason replaces the button ("Application app_064 is already in progress.").

> **DESIGN**
>
> - A member header (name, membership number, village, since) that reads as a person, not a record. Should it carry a repayment track record ("6 of 6 on time")? That would be new.
> - The facts strip of six figures.

Fakirappa Pujar: one active loan, one disbursed application.

A1 Application queue

Redesign

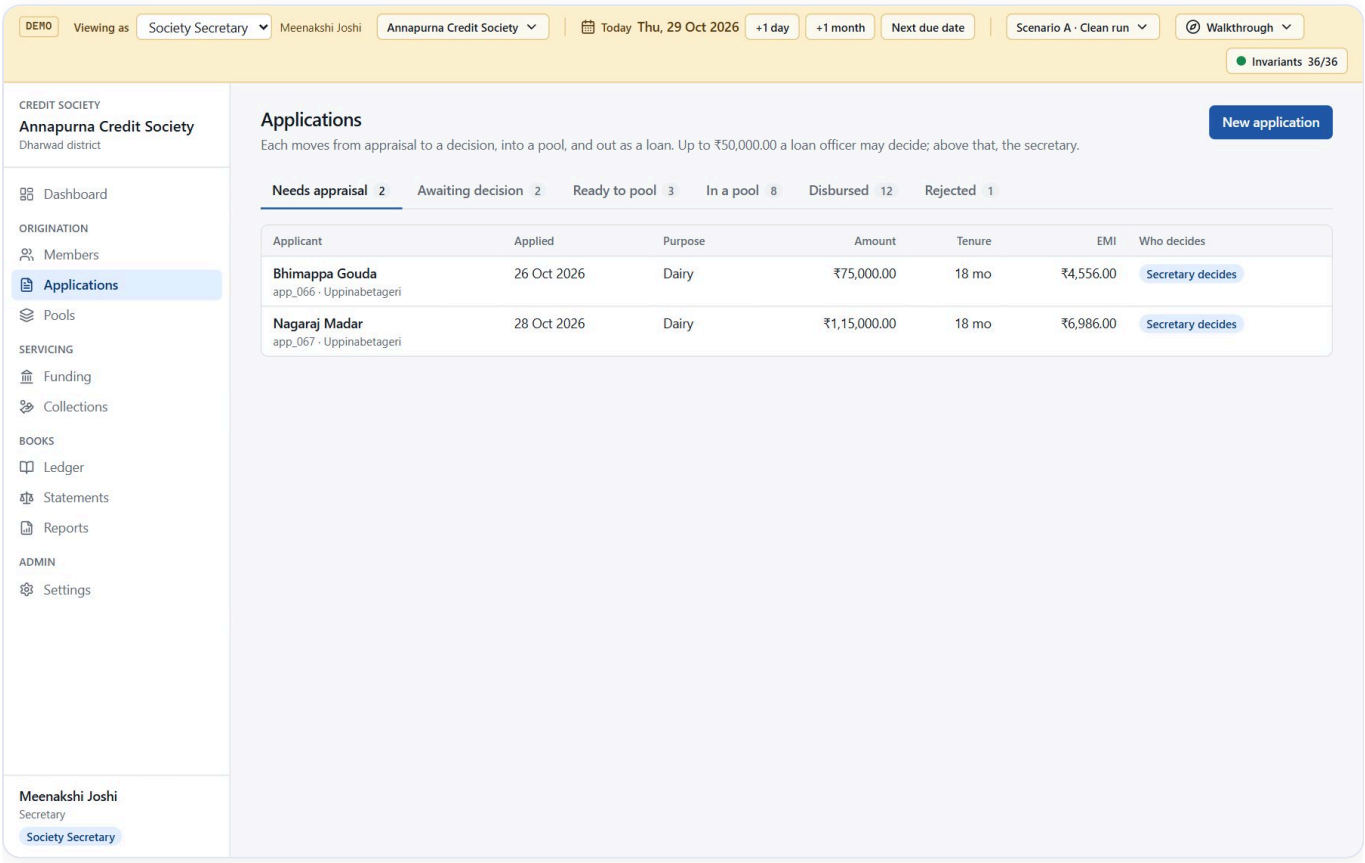

Origination › Applications · `/applications` · Secretary, Loan Officer, Auditor

FLOW Needs appraisal → Awaiting decision → Ready to pool → In a pool → Disbursed (or Rejected)

Six tabs, one per stage, each with its count. The table shows applicant (name, id, village), applied, purpose, amount, tenure and EMI. The last column changes by tab: who decides (Officer can decide up to ₹50,000, Secretary decides above it), the pool, the loan, or the rejection reason. Pending work sorts oldest first; finished work newest first.

DESIGN

- Six stage tabs: tabs, a segmented control, or a small pipeline with counts that doubles as the filter?
- The “who decides” pill: how prominent should the officer limit be on each row?

Needs appraisal: two applications above the officer limit.

A2 New application

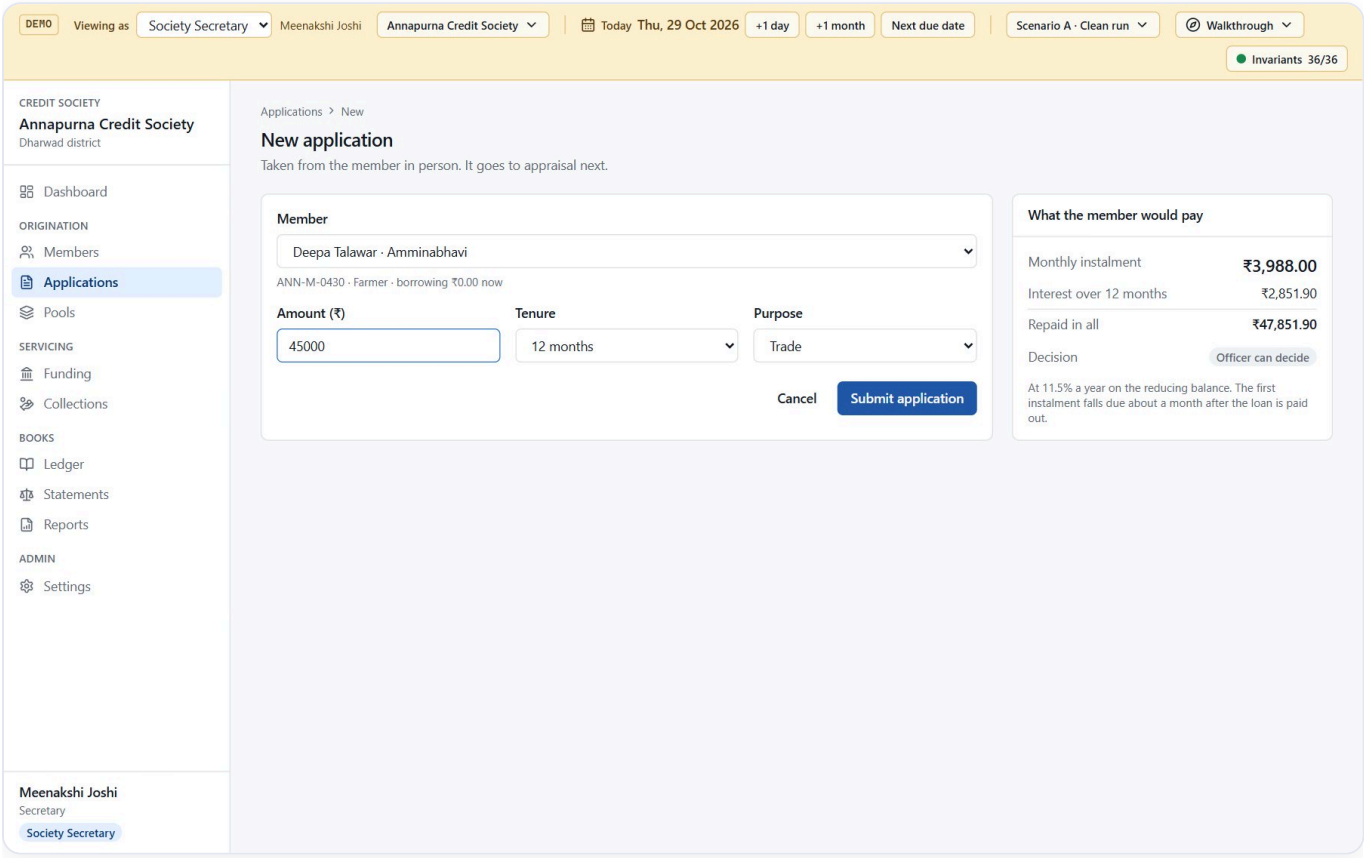

Redesign

Applications › New · `/applications/new` · Secretary, Loan Officer

The member (only active members without an application in progress), amount in rupees, tenure (6–60 months) and purpose. On the right, **What the member would pay** updates as the amount is typed: monthly instalment, interest over the tenure, repaid in all, and who will decide. If the member's total borrowing would pass ₹5,00,000 it says so, in red. Submitting opens the application (A3).

DESIGN

- The live quote is the emotional centre of the form. Should the EMI dominate, with the rest secondary?
- A member picker for hundreds of members: search with avatar initials rather than a native select?
- Tenure as a select, chips (6, 12, 18, 24…) or a slider?

₹45,000 over 12 months: ₹3,988 a month, ₹2,851.90 in interest, within the officer's limit.

A3 Appraisal and decision

Redesign

Applications › an application · `/applications/:id` · appraise and decide: Secretary, Loan Officer; read: Auditor

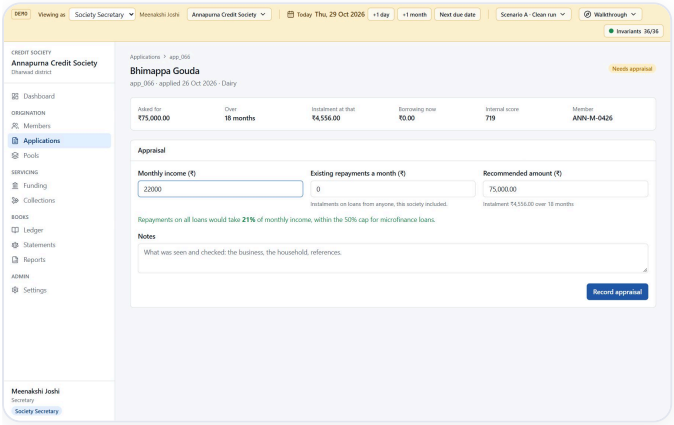

FLOW Needs appraisal: record the appraisal → Awaiting decision: approve (amount, tenure) or reject (reason) → Decided: summary, pool, loan

Appraisal: monthly income, existing repayments and a recommended amount (0 recommends rejection), with notes. As the figures are typed, a line shows repayments on all loans as a share of monthly income against the 50% cap for microfinance loans, green within it and red above it. It informs; it does not block.

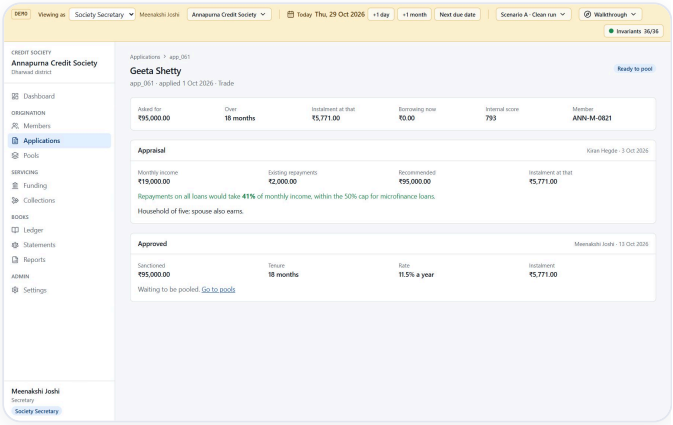

Decision: Approve or Reject; the amount (up to what was asked) and tenure, with the new EMI; or a reason. Above ₹50,000 only the secretary may decide. An officer sees why, and the button stays disabled.

DESIGN

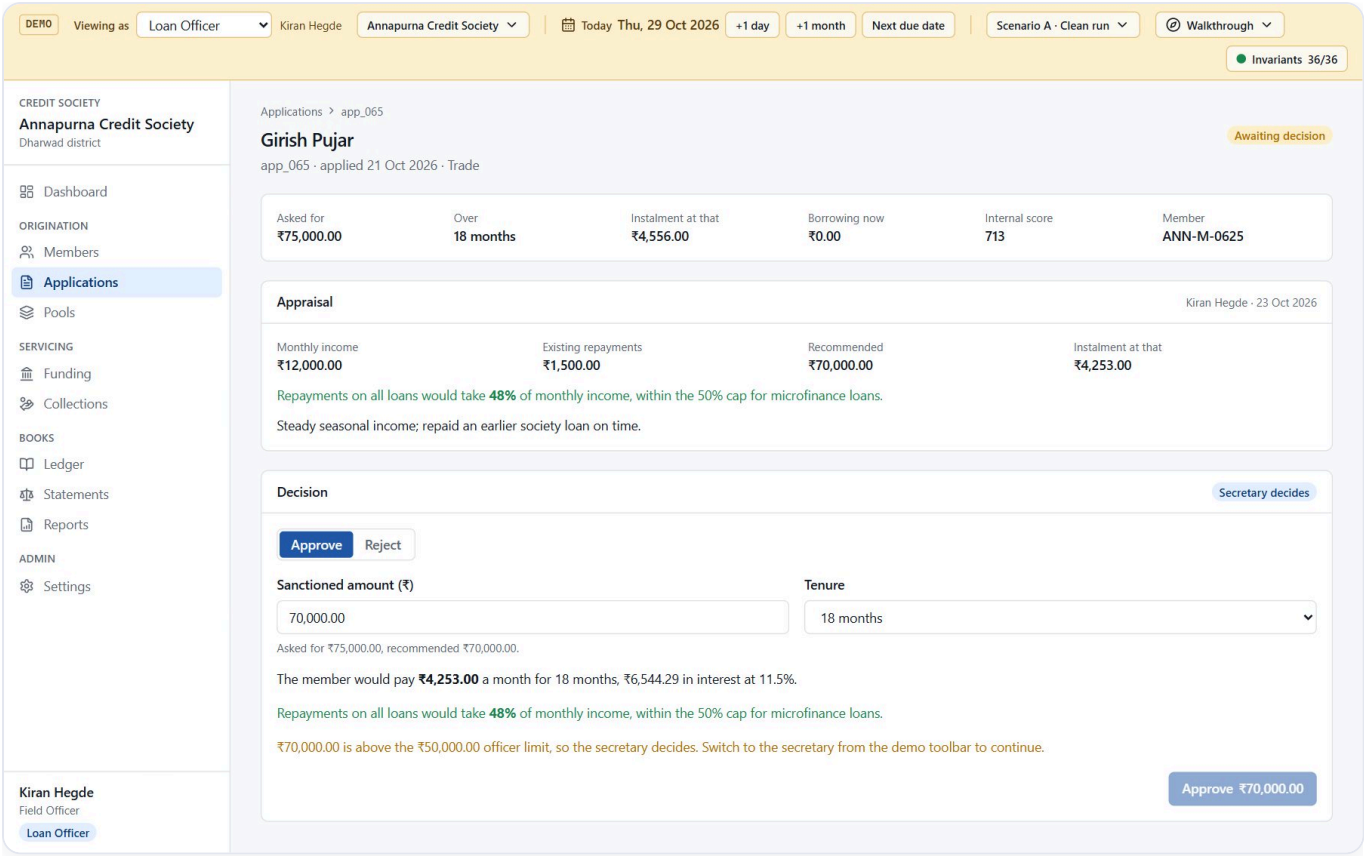

- The page as a timeline of steps (applied, appraised, decided, pooled, disbursed), with the current step's form open?
- The repayment-burden line as a small gauge against the 50% cap?
- The approve / reject choice is a two-button segmented control today.

Appraisal with a live repayment burden.

Decided: approved, waiting to be pooled.

A loan officer on a ₹70,000 recommendation: the secretary decides.

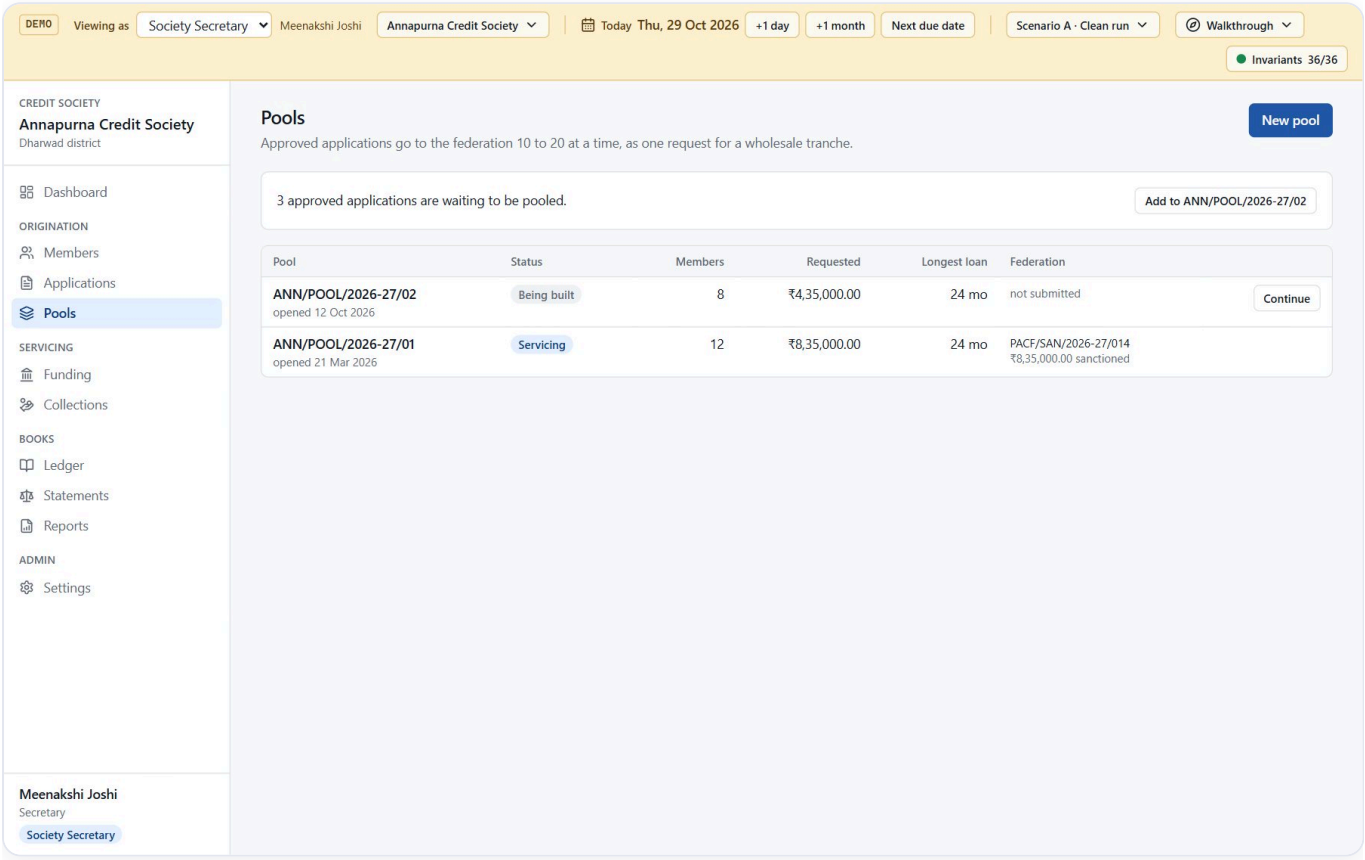

P1 Pools

Redesign

Origination › Pools · `/pools` · build and submit: Secretary; read: Loan Officer, Auditor

Approved applications go to the federation 10 to 20 at a time, as one request for a wholesale tranche. A banner counts approved applications waiting to be pooled, with **Add to** the open pool (or Start a pool). The table: reference and opening date, status, members, requested, longest loan, and the federation outcome (sanction reference and amount, decline remarks, or "submitted on"). Open pools have **Continue**.

> **DESIGN**
>
> - Pools as cards (with the member band and economics in miniature) or a table?

One pool being built, one servicing.

P2 Pool builder

Redesign

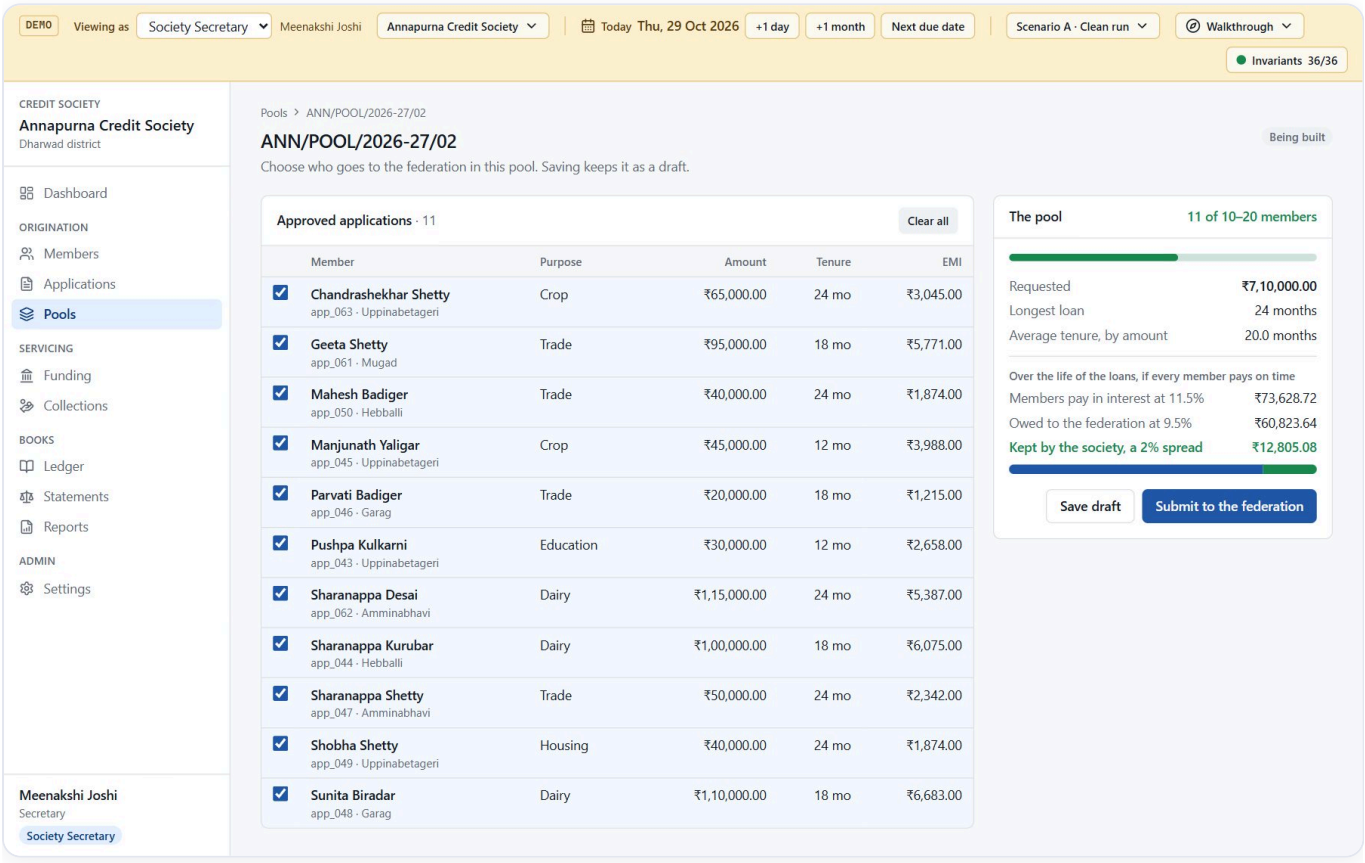

Pools › New / Continue · `/pools/new?pool=:id` · Secretary

FLOW Tick approved applications → watch the economics → Save draft or Submit to the federation (confirm) → pool detail

On the left, approved applications with checkboxes (member, purpose, amount, tenure, EMI) and Select all. On the right, sticky: the member band (10–20), requested amount, longest loan, average tenure by amount, and over the life of the loans what members pay in interest at 11.5%, what is owed to the federation at 9.5%, and what the society keeps (the 2% spread), with a split bar. Below 10 members it says how many more; Submit stays disabled.

DESIGN

- Two panes on desktop, stacked on tablet. The economics panel is the persuasive part: how to make the society's margin read at a glance.
- The member band, with the 10–20 range and the count.
- Selecting rows: the whole row is clickable today, as well as the checkbox.

Eleven selected: ₹7,10,000 requested, the spread shown over the life of the loans.

P3 Pool detail and re-scope

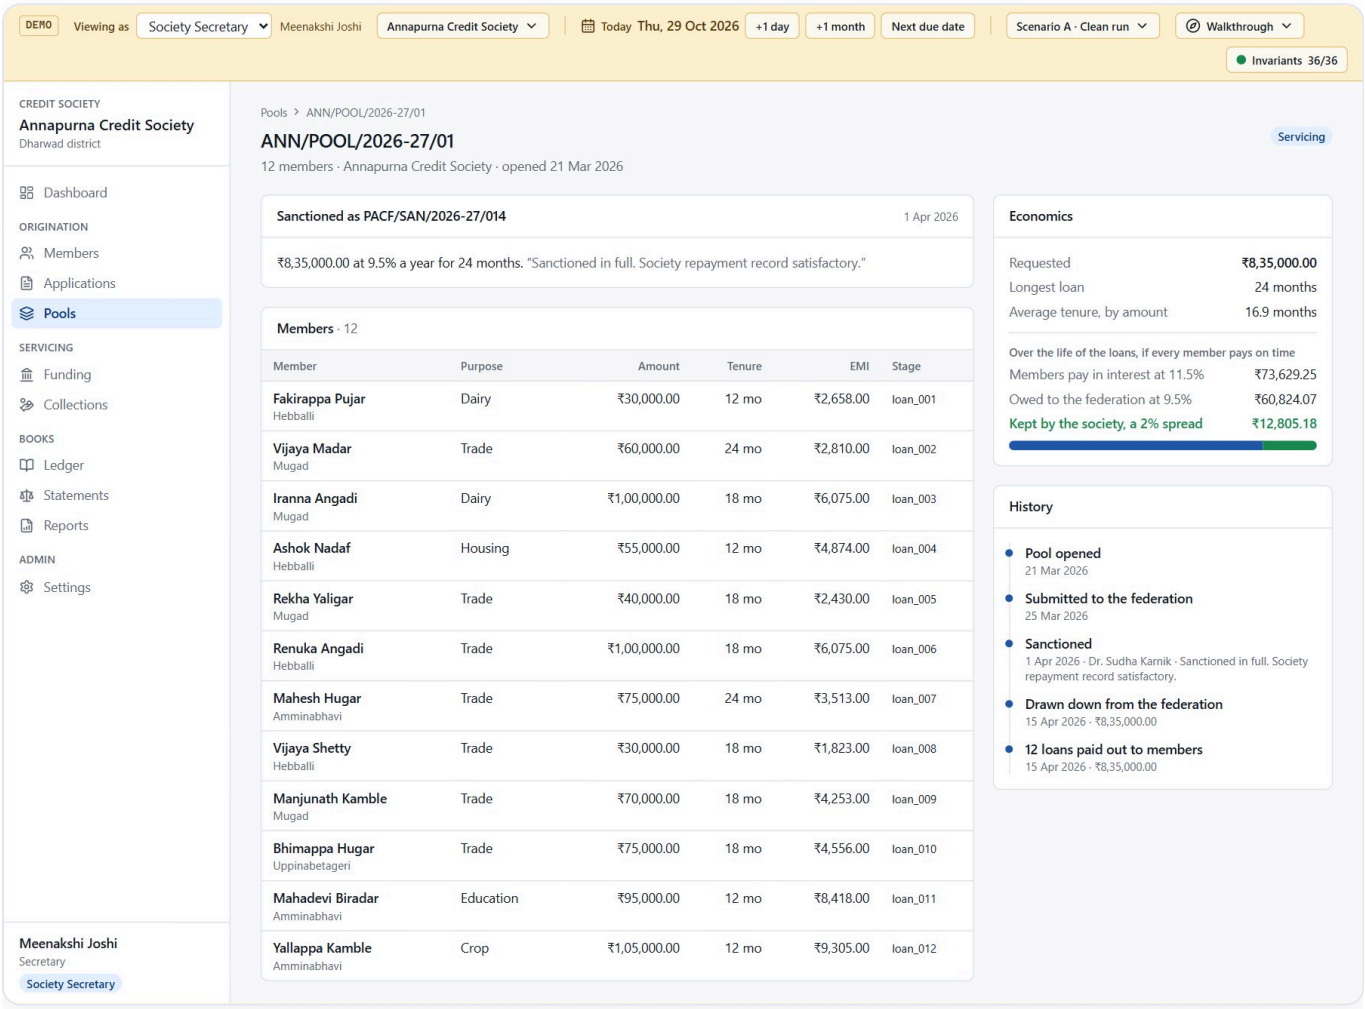

Redesign

Pools › a pool · `/pools/:id` · re-scope: Secretary; read: Loan Officer, Auditor

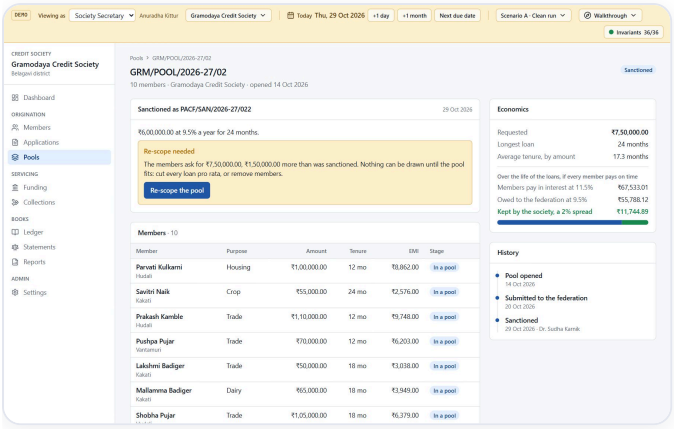

The federation’s decision card (waiting, under review, declined with remarks, or sanctioned with reference, amount, rate and tenure), the members with their stage or loan, the economics, and a history timeline (opened, submitted, sanctioned by whom, re-scoped, drawn down, loans paid out).

Re-scope. When the federation sanctions less than the members ask for, nothing can be drawn until the secretary re-scopes the pool: either cut every loan by the same proportion (each rounded down to the rupee, never below the ₹5,000 minimum), or remove members until the rest fit (those removed can join another pool). The secretary must confirm the members agreed.

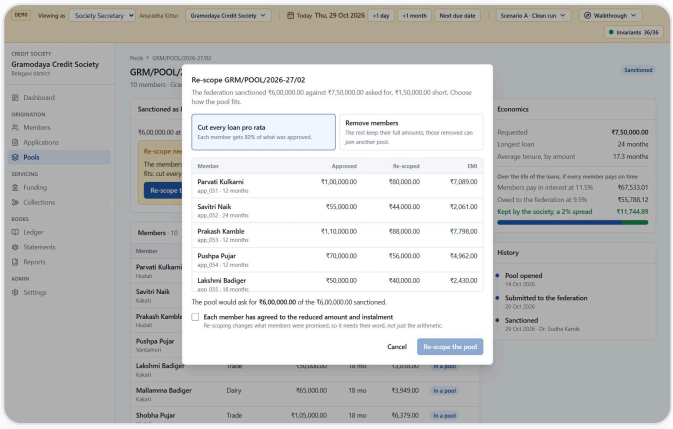

> **DESIGN**
>
> - The re-scope dialog’s two methods, the before and after amounts, and the confirmation that gates it.
> - The history timeline, used here and on the federation’s review.

A servicing pool: decision, members, economics and history.

Sanctioned ₹6,00,000 against ₹7,50,000: re-scope needed.

The re-scope dialog, pro rata: each member at 80%, new EMIs.

T1 Funding

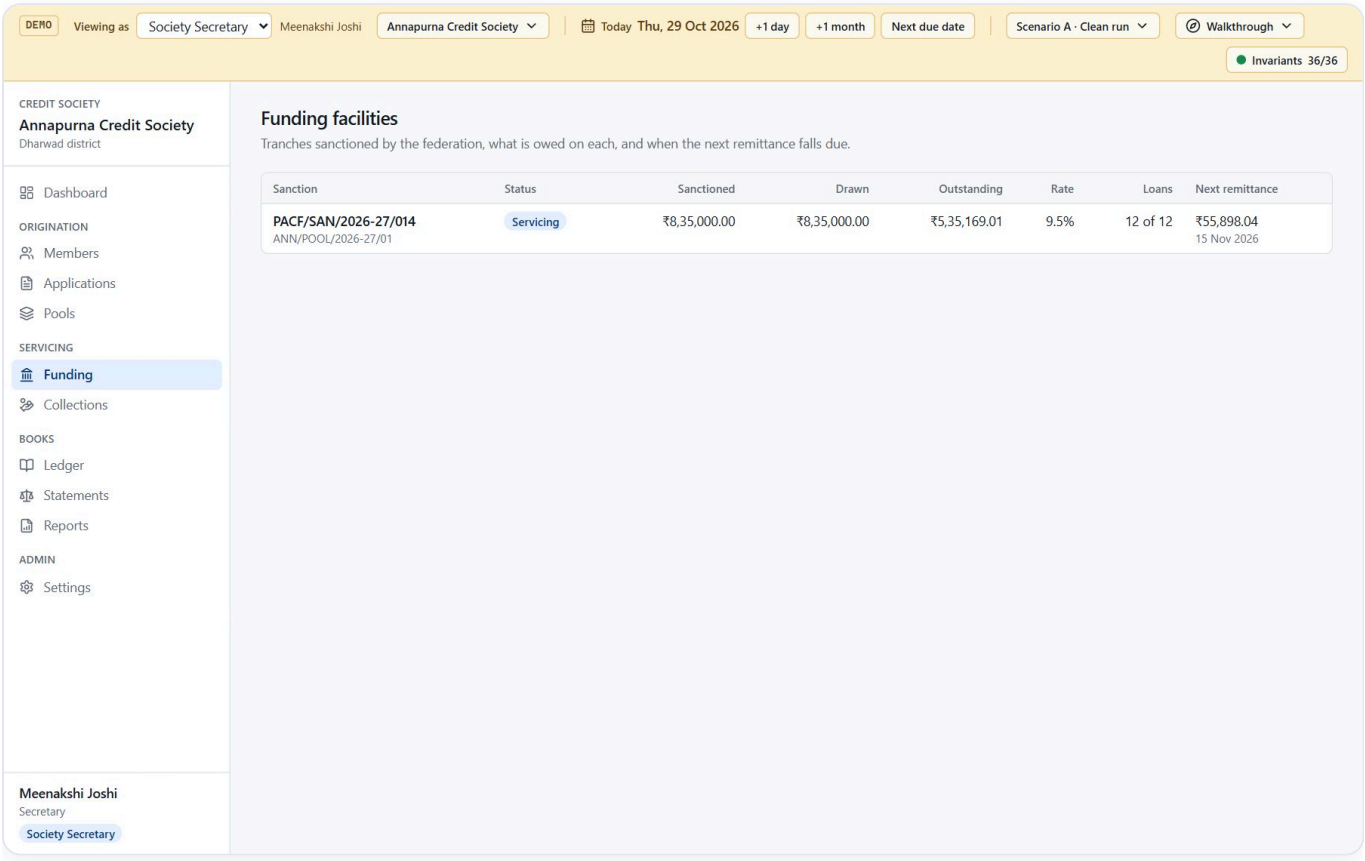

Redesign

Servicing › Funding · `/tranches` · Secretary, Loan Officer, Auditor

Each tranche the federation has sanctioned to the society: sanction reference and pool, sanctioned, drawn, outstanding, loans funded and active, status, and the next remittance (date and amount, overdue in red).

DESIGN

- A tranche as a card with a drawn / outstanding meter and the next remittance as its call to action?

One tranche, servicing; next remittance 15 Nov.

T2 Tranche detail, remittance and disbursement

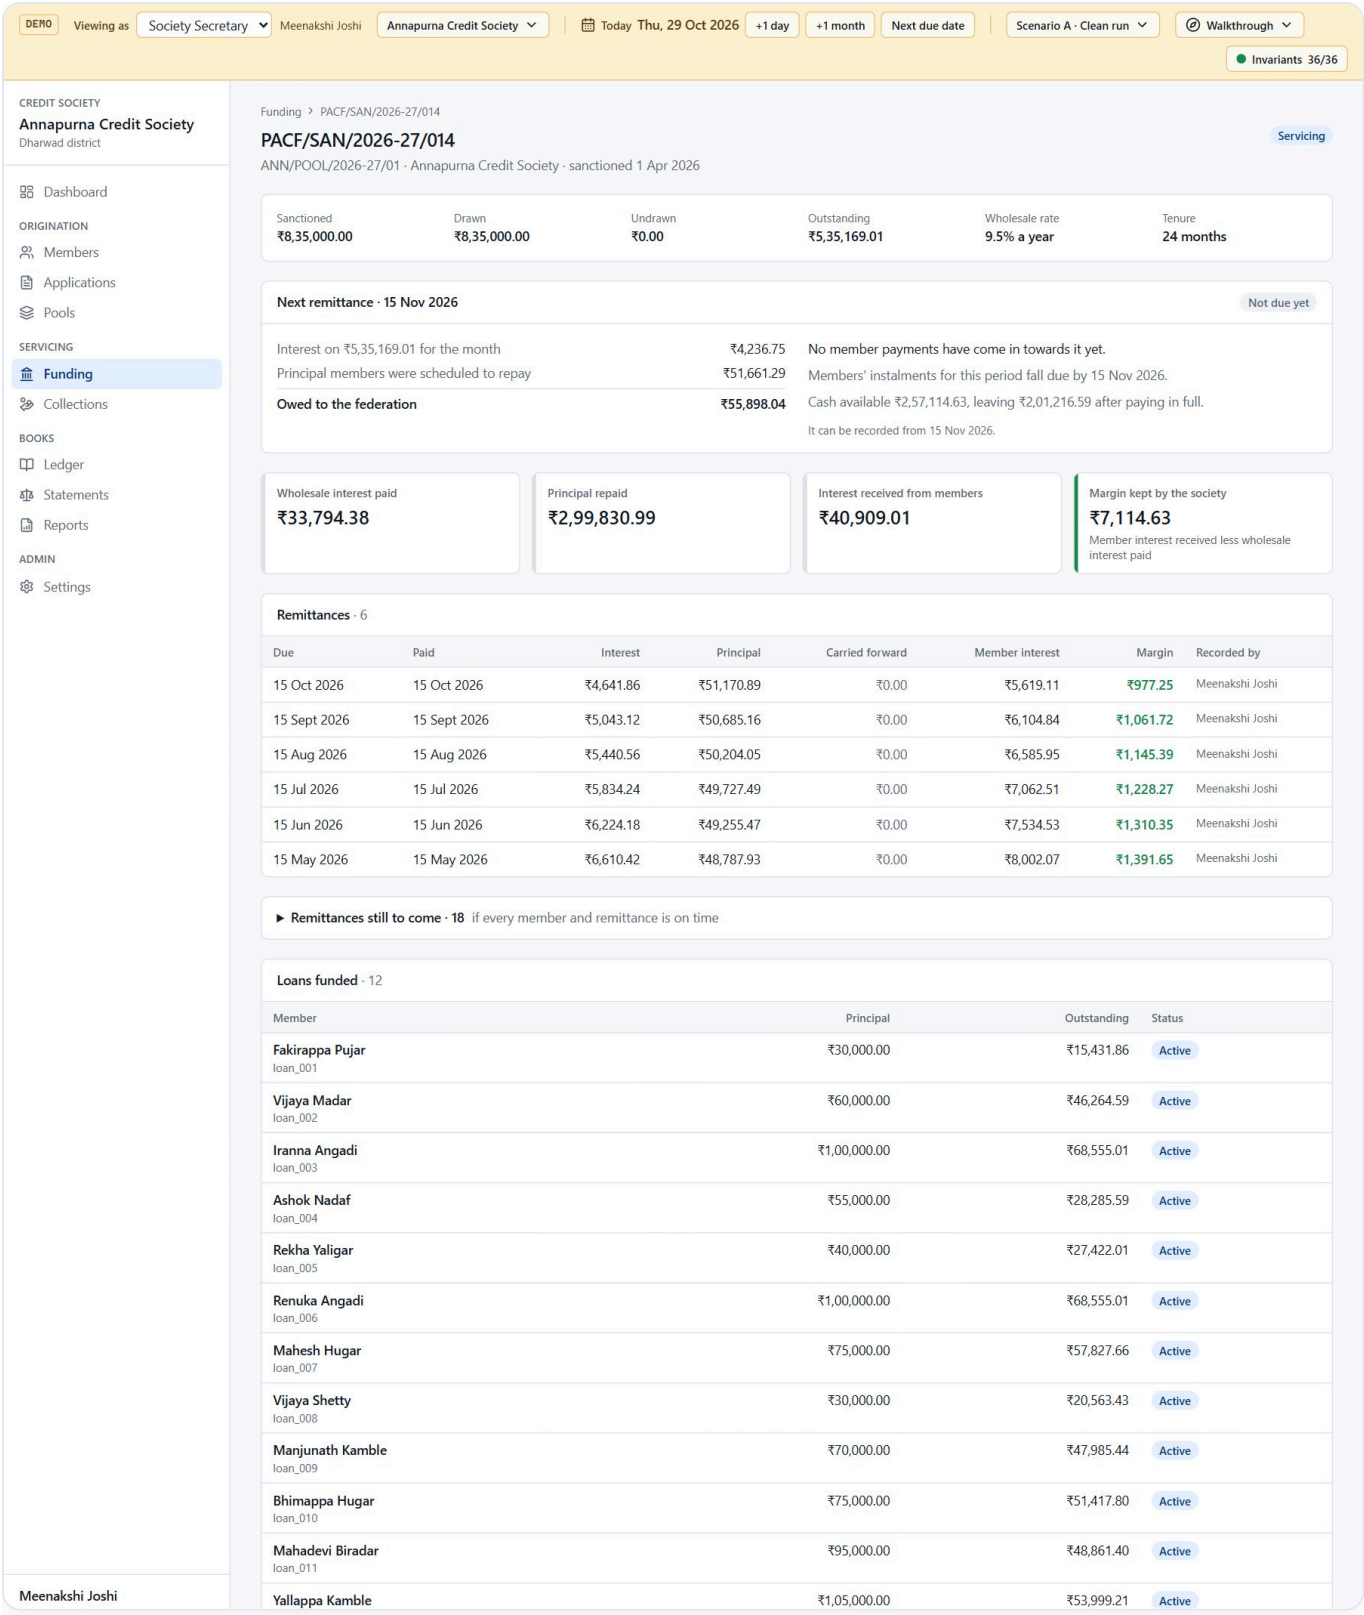

Redesign

Funding › a tranche · `/tranches/:id` · remit, draw and disburse: Secretary; read: Loan Officer, Auditor

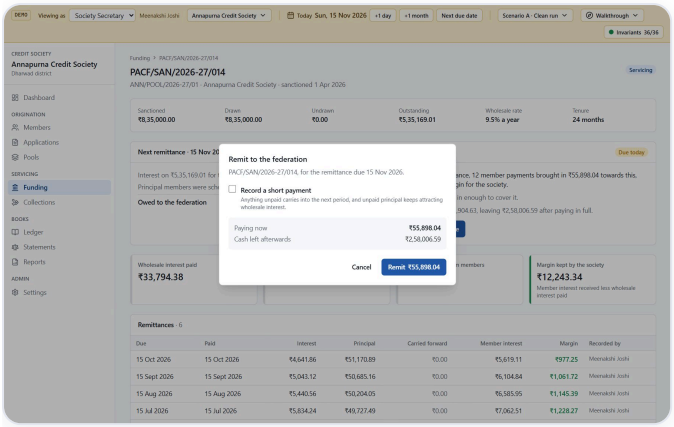

FLOW Sanctioned → (re-scope if short) → Draw down and disburse (choose members, first due date) → each month: Record remittance on the date → Closed

Facts (sanctioned, drawn, undrawn, outstanding, rate, tenure); the **Next remittance** card (interest on the tranche balance, principal members were due to repay, prepayments and arrears, the total owed, how much members have paid in towards it, and cash before and after); totals to date, including the margin kept; the remittance history with the margin each month earned; the remittances still to come; and the loans funded.

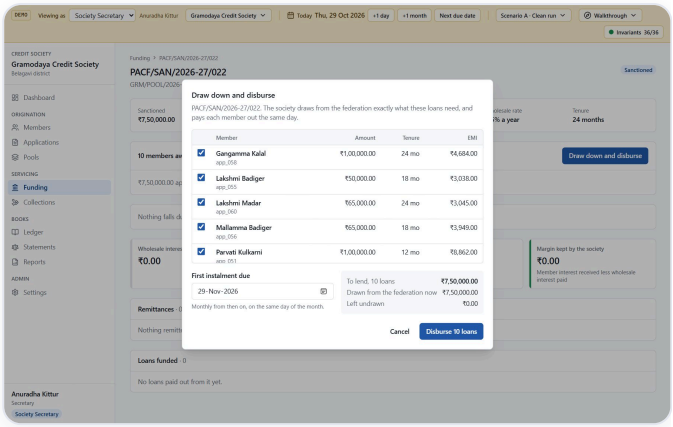

> **DESIGN**
>
> - The Next remittance card holds a small calculation (interest + principal + arrears = owed) beside a narrative. How to make the sum legible.
> - The remittance dialog's "short payment" path and its consequences (carried forward, cash below zero).
> - The disbursement dialog's list, date and summary (to lend, drawn now, left undrawn).

Tranche PACF/SAN/2026-27/014: six remittances on the day, the margin each month kept.

Record remittance, 15 Nov: pay in full or short; what carries forward.

Draw down and disburse: members, first due date, what is drawn now.

K1 Collections desk and payment drawer

Redesign

Servicing › Collections · `/collections` · record: Loan Officer, Secretary; read: Auditor

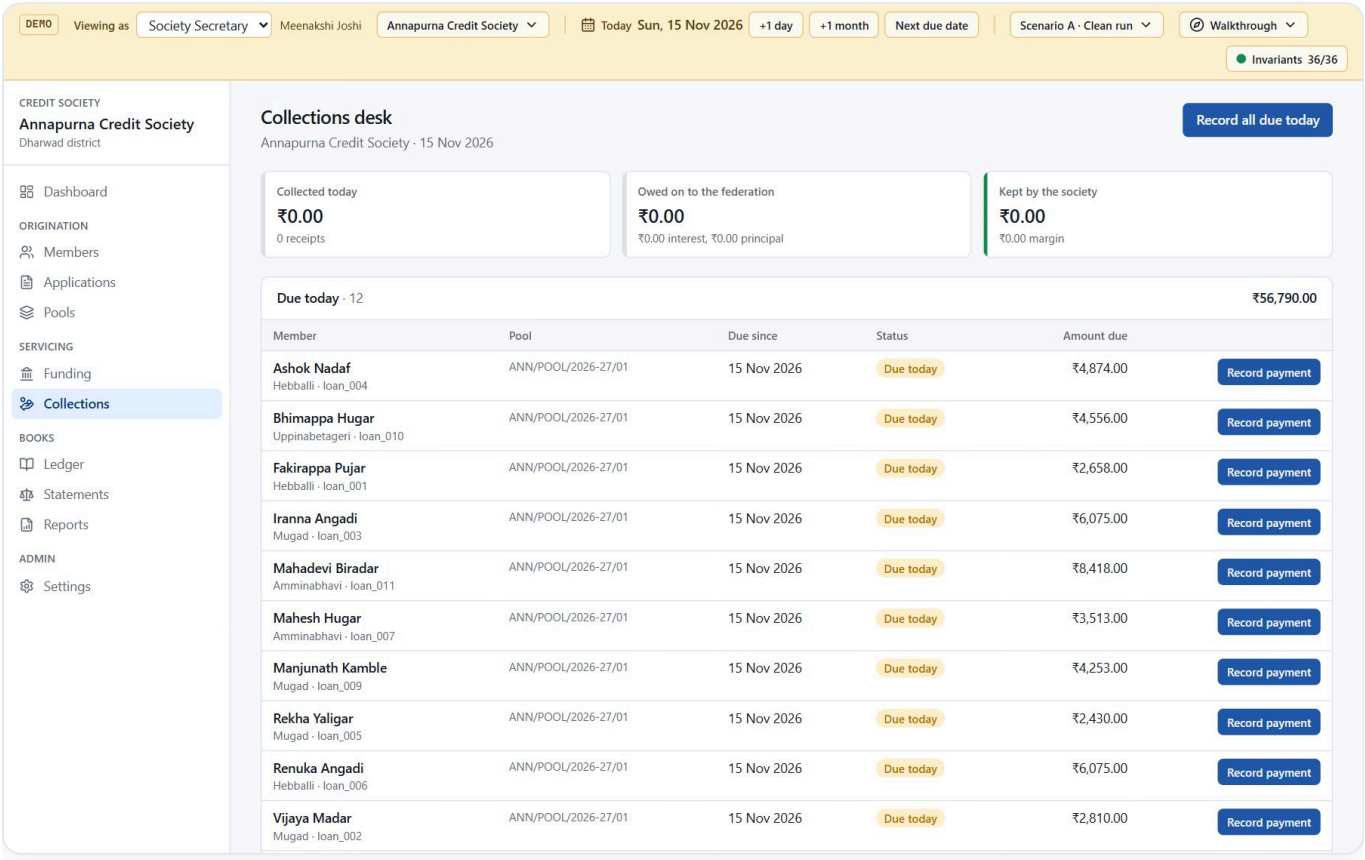

FLOW Due today / overdue list → Record payment (drawer: amount, mode, apply extra to principal) → live preview of the split → Record → receipt with its journal entry

Totals for the day (collected, owed on to the federation, kept by the society), then **Due today**, **Overdue** (days late, in grace or past it, penal accruing) and **Coming up in the next 7 days**, each row with member, pool, due since, amount and Record payment. **Record all due today** records a full cash receipt for each instalment due, after one confirmation.

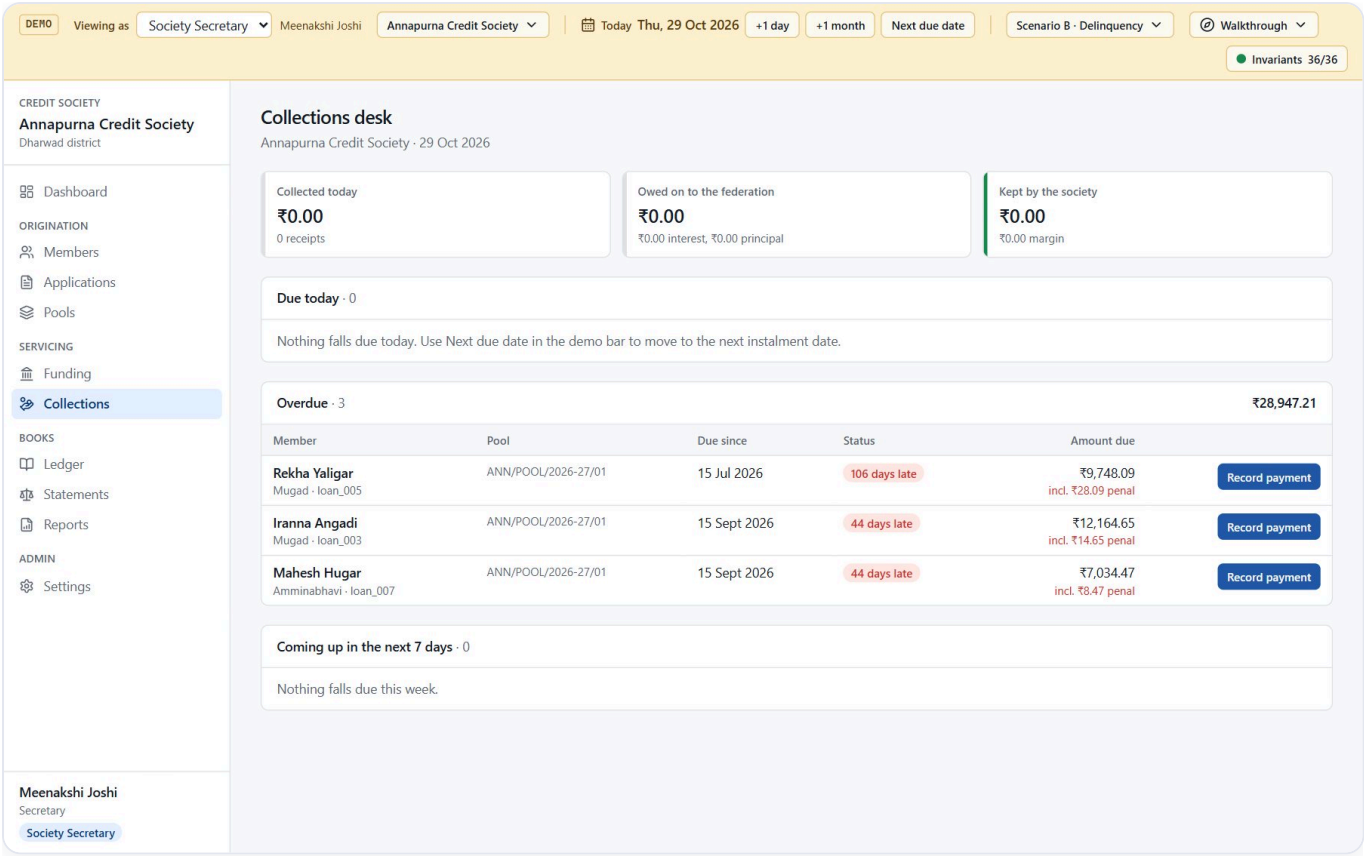

The drawer shows what is due and outstanding, the amount (Amount due, Pay off the loan), how it is received, “apply anything extra to principal”, and a live preview: how the payment is applied (penal, overdue interest, principal…) and where it goes (to the federation, kept by the society), with words.

DESIGN

- The desk is the most-used screen. A faster rhythm: inline “record due amount” on each row, with the drawer for anything else?
- The drawer’s live split preview (the split bar, F4) and the receipt it turns into.
- How lateness reads: in grace against past grace, and penal interest accruing.

15 Nov 2026: twelve instalments due today.

Scenario B: three members overdue, two past 44 days and one past 106.

L1 Loan detail

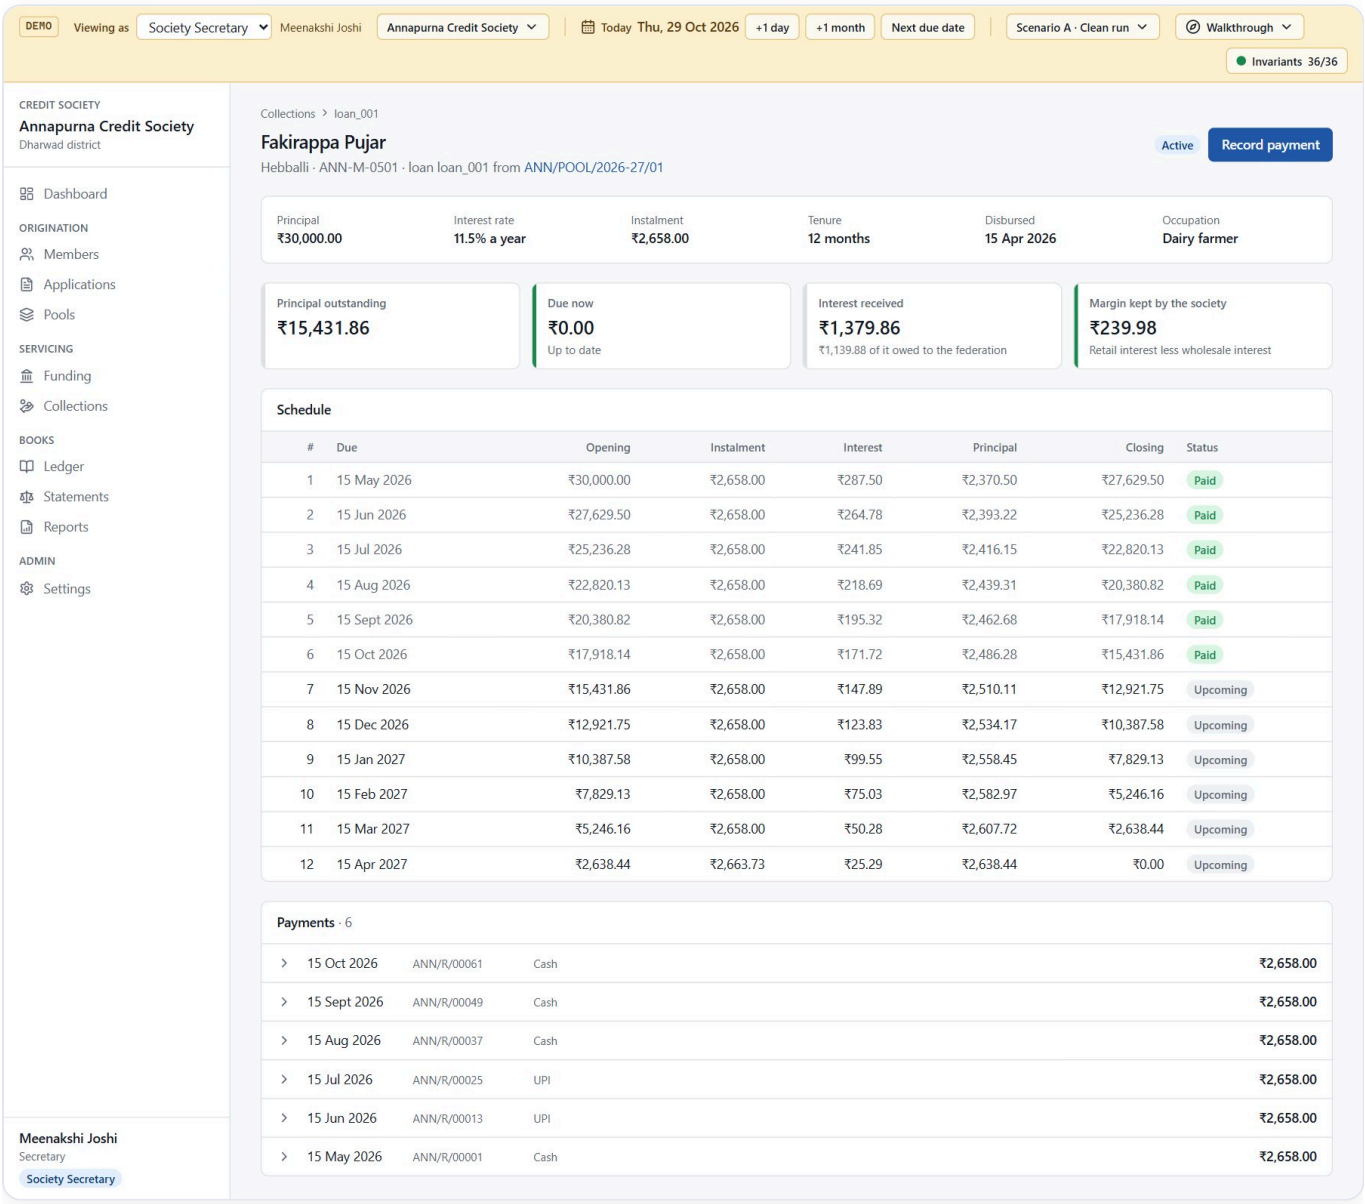

Redesign

A loan (from collections, members, ledger) · `/loans/:id` · record: Loan Officer, Secretary; read: Auditor

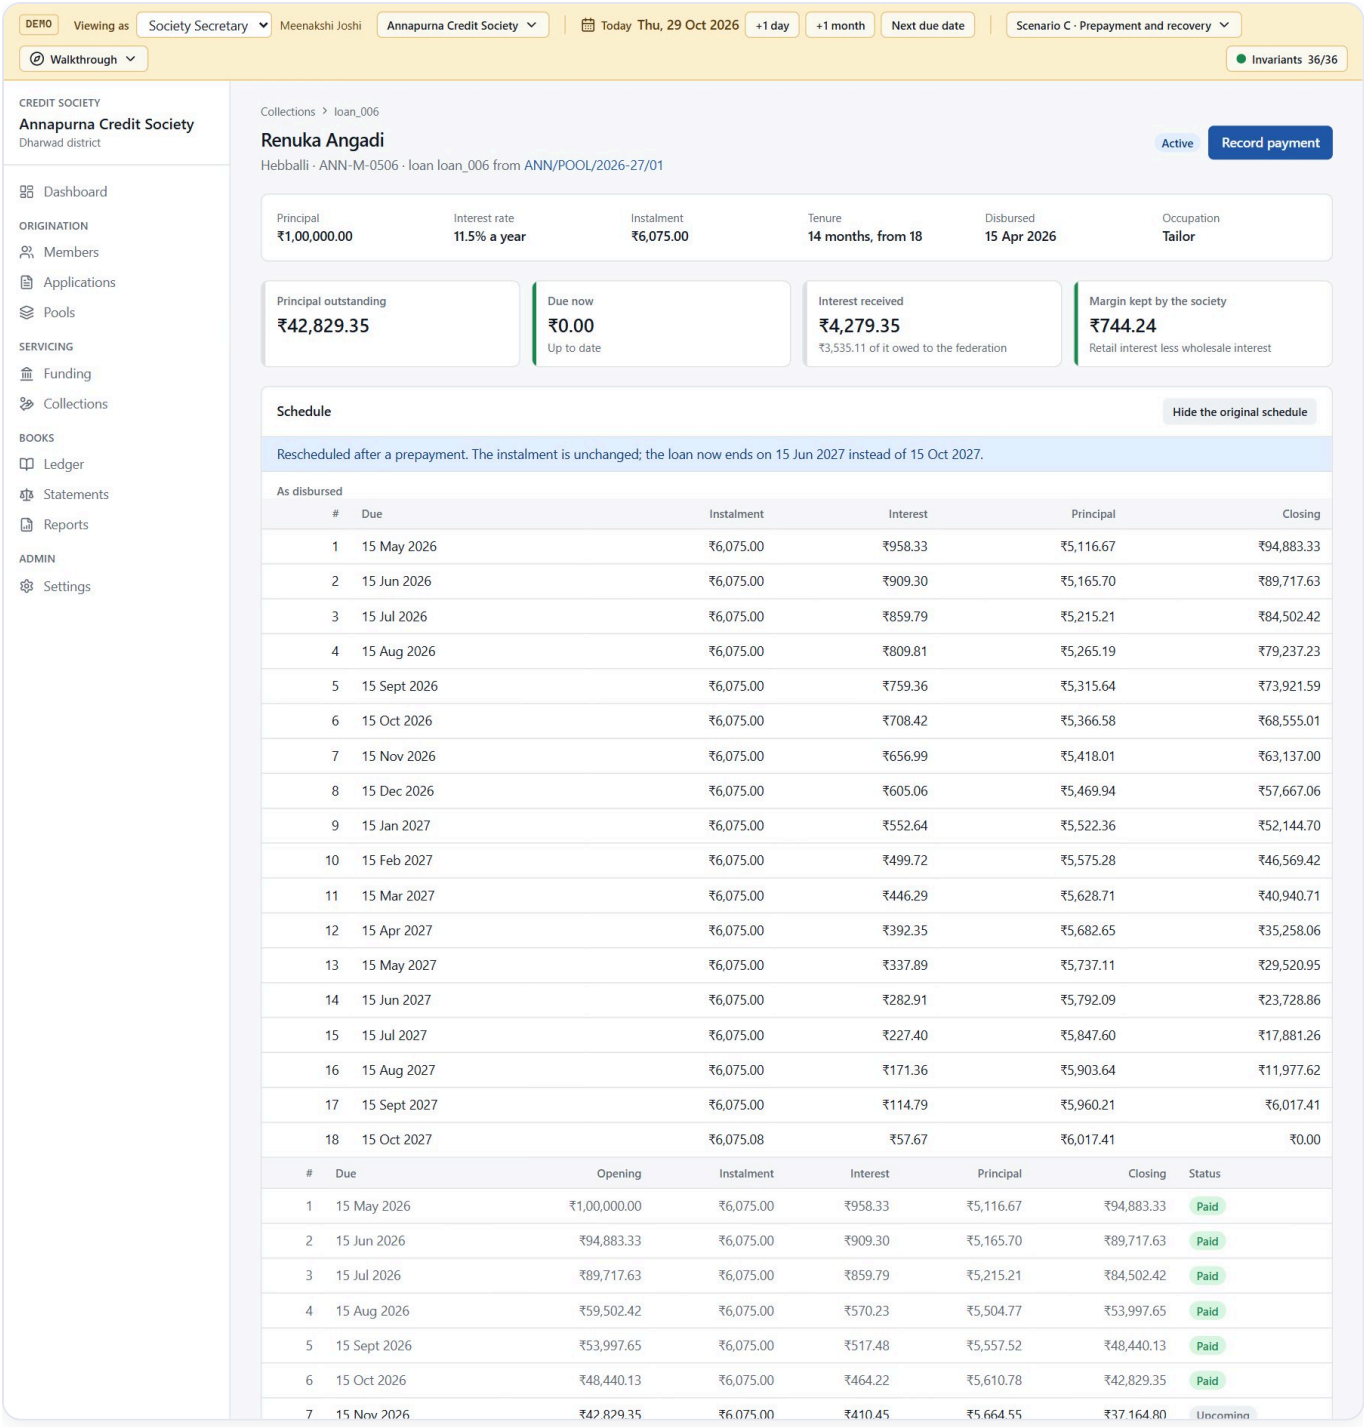

Facts (principal, rate, EMI, tenure, disbursed, pool and tranche), the position today (outstanding, due now, days past due, penal), totals (interest paid, wholesale share, margin retained), the amortisation schedule with a status per instalment, and every payment, newest first, each opening to its split and its journal entry. After a prepayment the loan is re-amortised at the same EMI over a shorter tenure, and the original schedule can be shown beside it.

DESIGN

- The schedule table (up to 60 rows): progress through it, the current row, and paid rows.
- A receipt opened: allocation, split and journal entry in a compact, readable block.
- Original against rescheduled: side by side, or overlaid?

loan_001: six of twelve instalments paid.

Scenario C: Renuka Angadi's ₹25,000 prepayment; the same EMI, a shorter schedule, the original alongside.

G1 General ledger: journal, T-accounts, trial balance

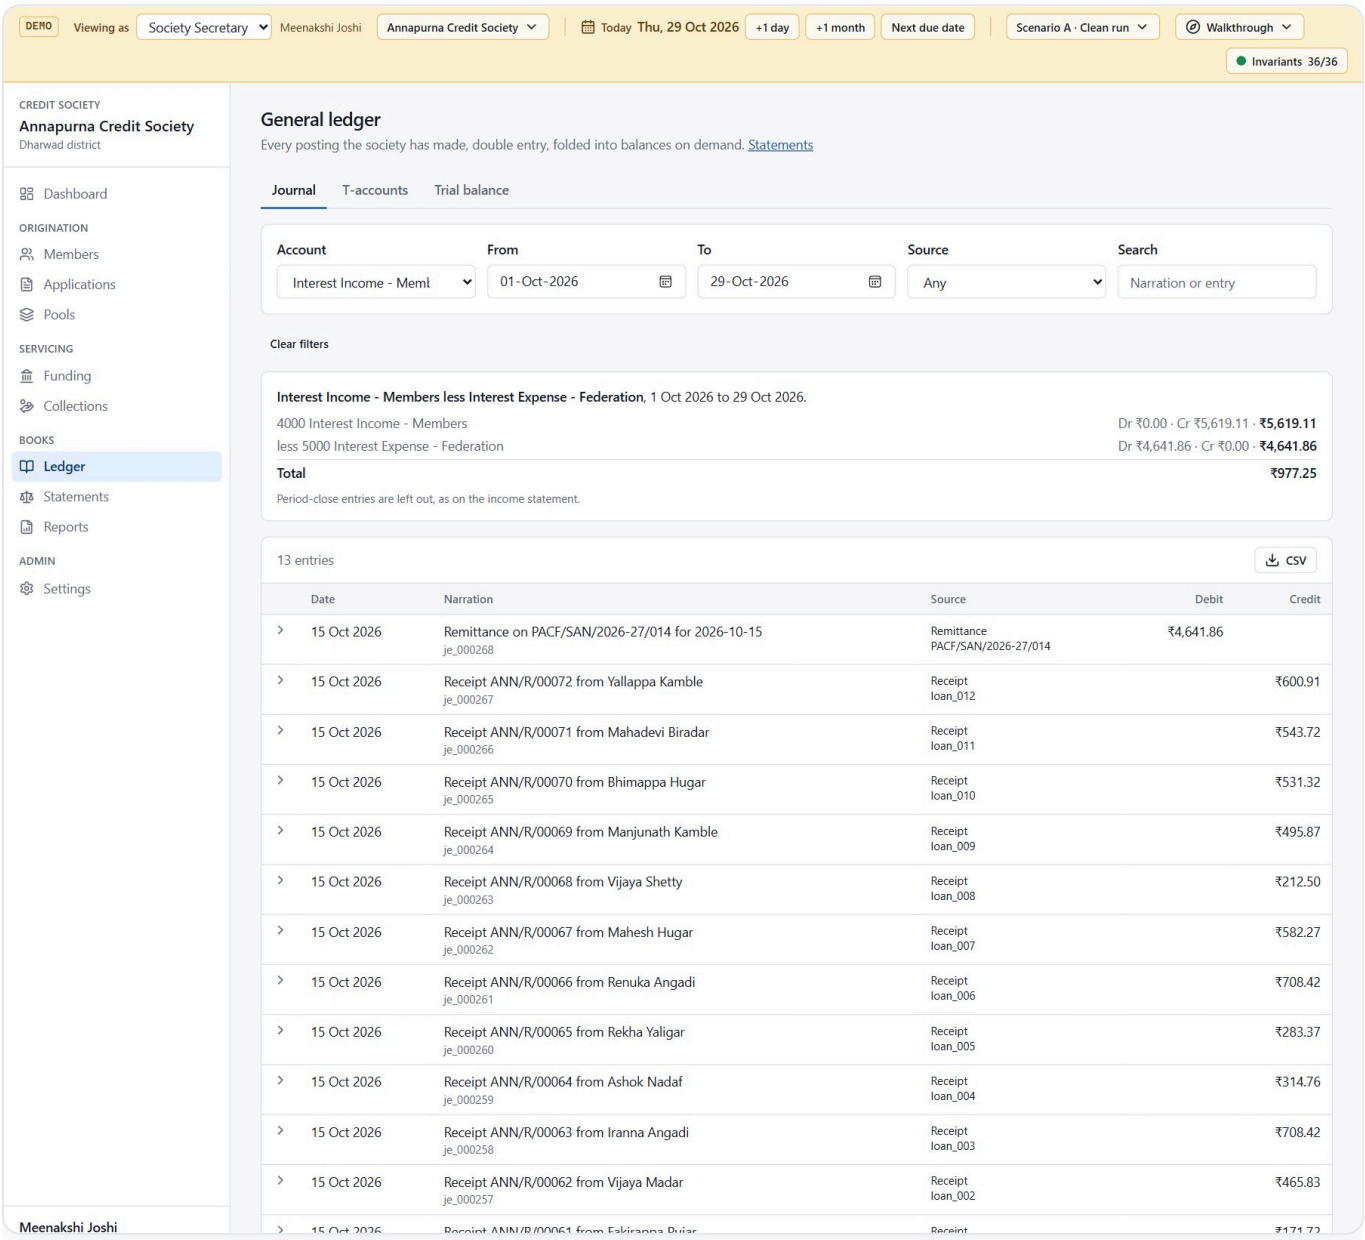

Redesign

Books › Ledger · `/ledger`, `?view=accounts`, `?view=trial` · Secretary, Loan Officer, Auditor

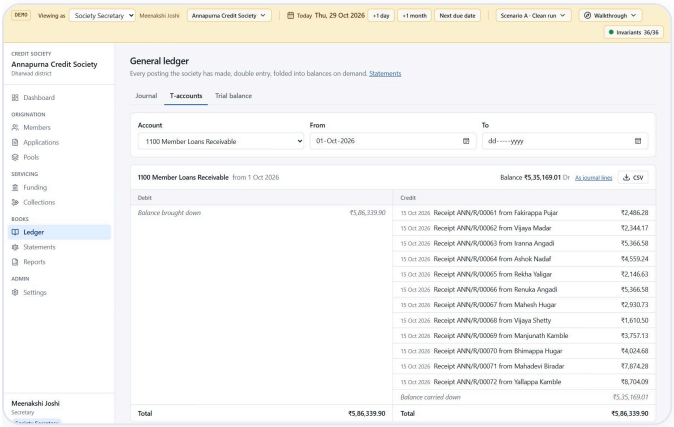

Journal: every entry, newest first, filtered by account, dates, source and search. When reached from a figure, it becomes a **trace**: a card naming the accounts and dates, their debits, credits and balances, and the total that equals the figure, with only the lines behind it below. Each entry expands to its debit and credit lines. **T-accounts**: one account as a classic T, balance brought down and carried down. **Trial balance**: each account in its debit or credit column at any date, with a Balanced pill. CSV on every view.

DESIGN

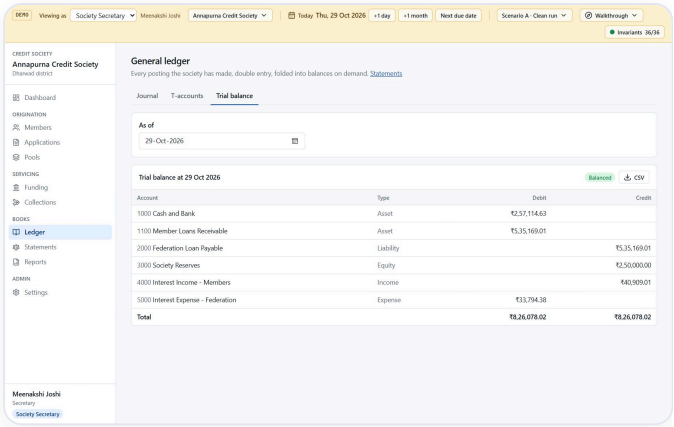

- The trace card is how every dashboard figure is explained. It should feel like an answer, not a filter.
- Filters (account, dates, source, search) in one bar; a date-range control.
- The T-account in a modern idiom that accountants still recognise.

The trace behind October's net interest income: ₹5,619.11 less ₹4,641.86 = ₹977.25.

T-account: Member Loans Receivable from 1 Oct.

Trial balance at 29 Oct: balanced.

G2 Statements

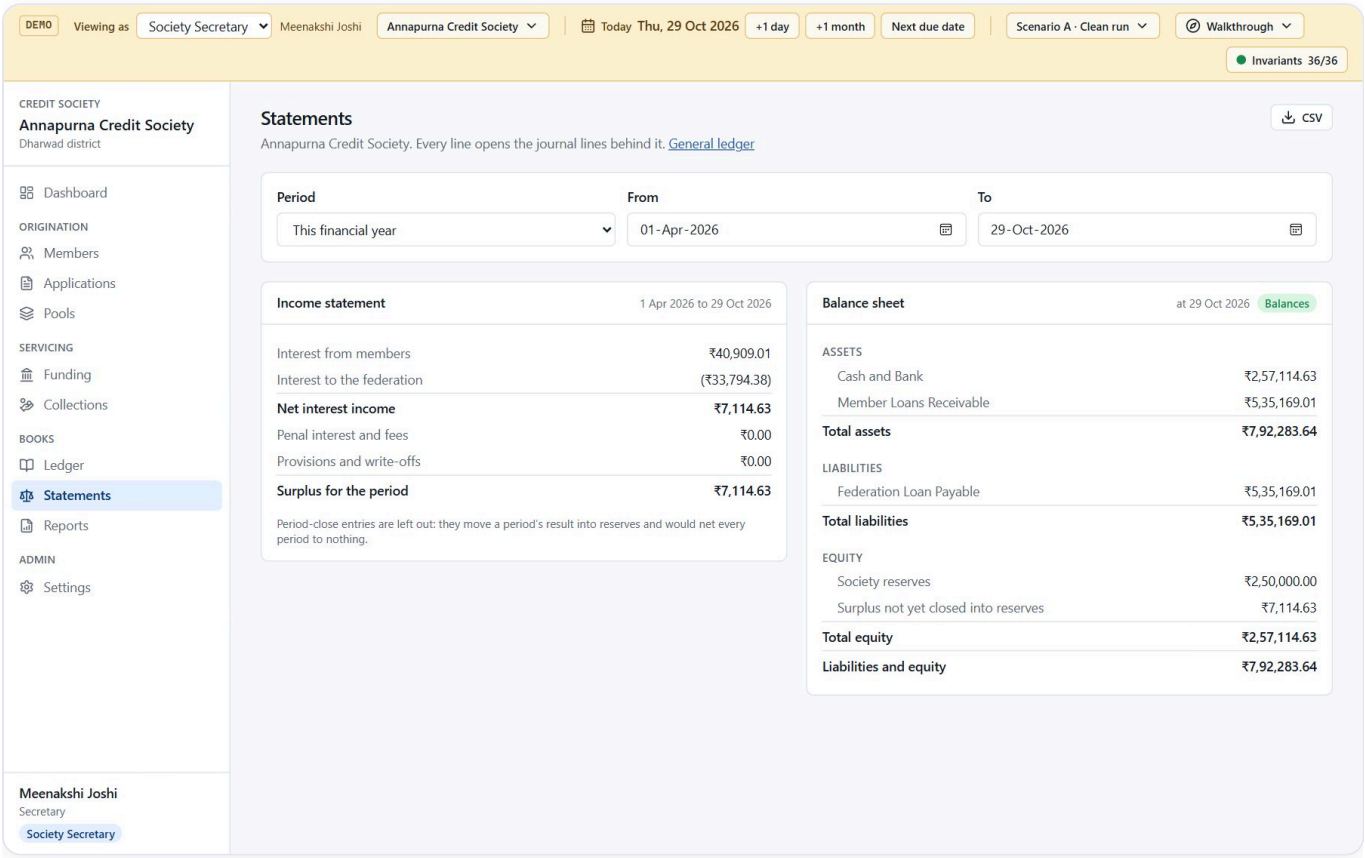

Redesign

Books › Statements · `/ledger/statements` · Secretary, Loan Officer, Auditor

A period (this month, last month, this quarter, this financial year, last financial year, since inception, or chosen dates). The **income statement** for the period (interest from members, interest to the federation, net interest income, penal interest and fees, provisions, surplus) and the **balance sheet** at its end (assets, liabilities, reserves and surplus not yet closed), with a Balances pill. Every line opens its journal lines or T-account. CSV.

DESIGN

- Statements that look like statements: indentation, subtotals, rules, and a print-friendly version.
- A comparison column (previous period) is not built yet. Should the design leave room for it?

This financial year, 1 Apr to 29 Oct 2026.

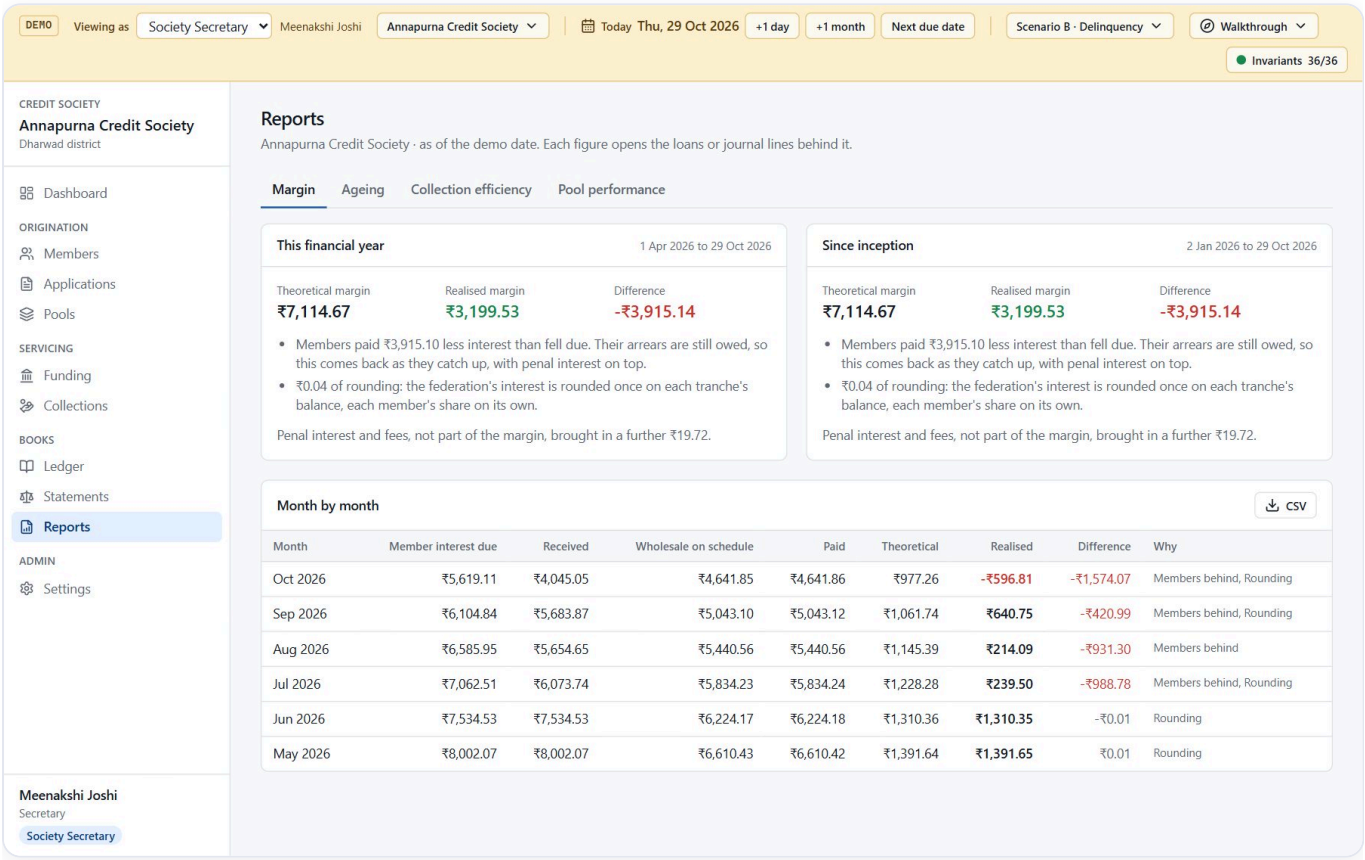

R1 Reports: margin, ageing, collection efficiency, pool performance

Redesign

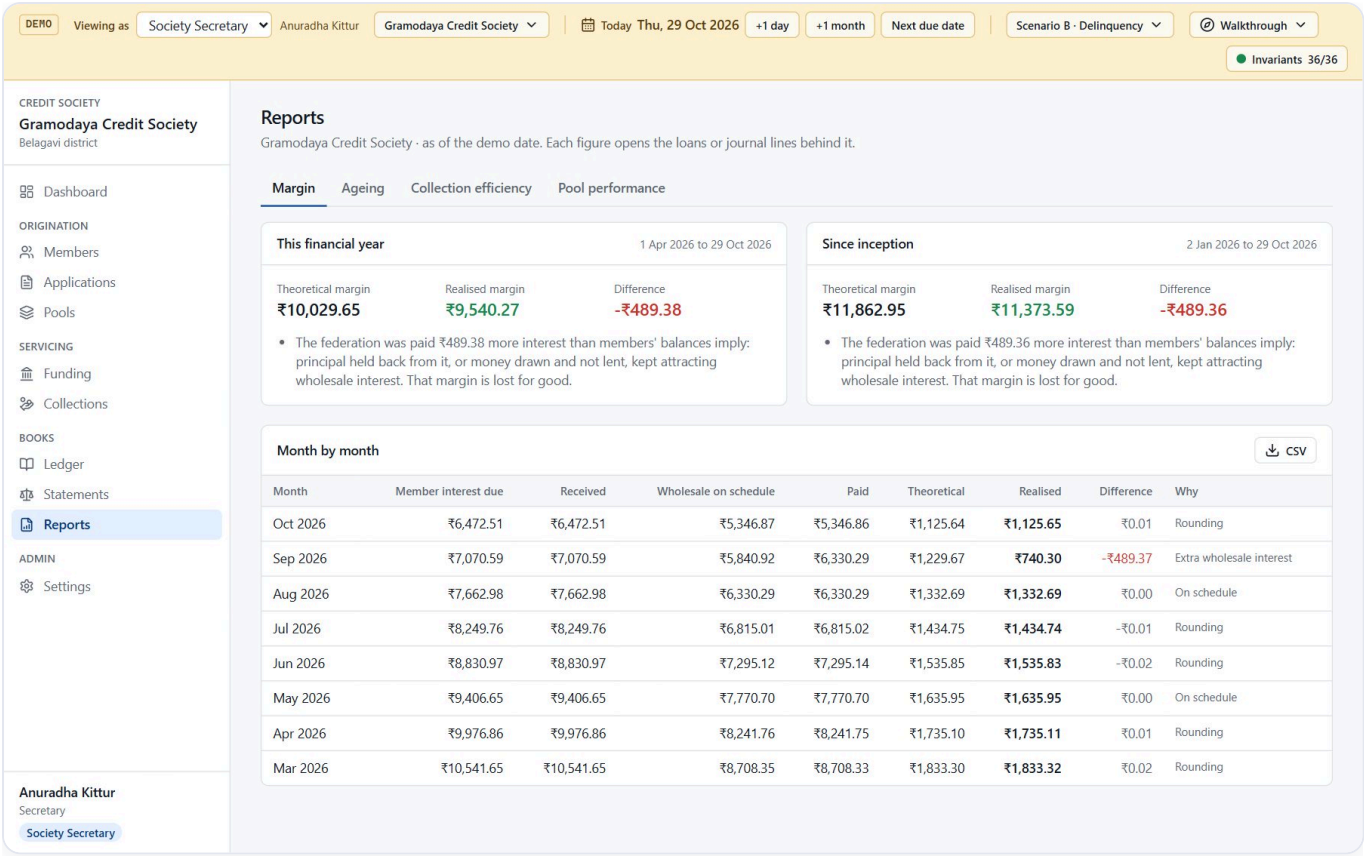

Books › Reports · `/reports` with four tabs · Secretary, Loan Officer, Auditor

- **Margin**: theoretical against realised for the financial year and since inception, the difference, and why, in words. The reasons: members behind, members catching up, prepayment timing, wholesale interest above schedule (lost for good), a remittance outstanding, and rounding. Then month by month.
- **Ageing**: the six buckets as tiles that filter the loan list; the total ties to the books.
- **Collection efficiency**: each month's instalments against what was paid by the month's end; choose a month to see each instalment.
- **Pool performance**: per funded pool, loans, disbursed, outstanding, repaid, at risk, interest, wholesale, margin, remittances on time.

> **DESIGN**
>
> - The margin story is the gate the prototype was built for. The explanation is a bulleted list today; should it become a small waterfall chart (theoretical → each reason → realised)?
> - The month-by-month table has nine columns: a chart above it?
> - Four reports as tabs, or a report landing page with cards?

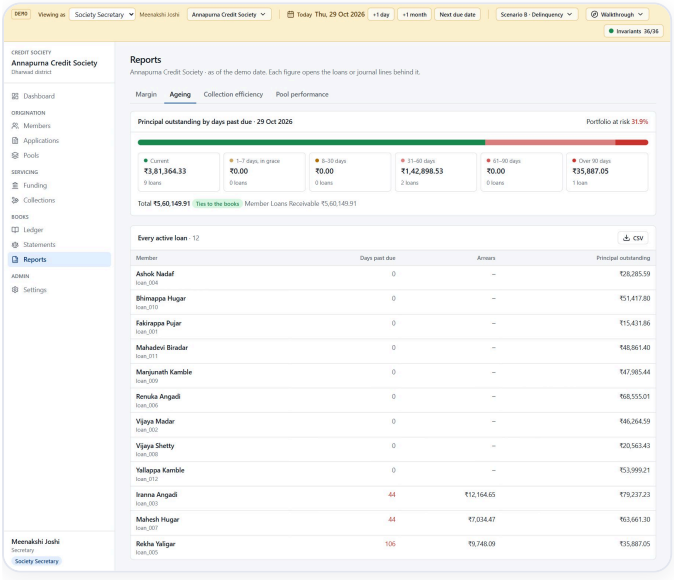

Scenario B, Annapurna: members ₹3,915.10 behind on interest; the gap builds from July.

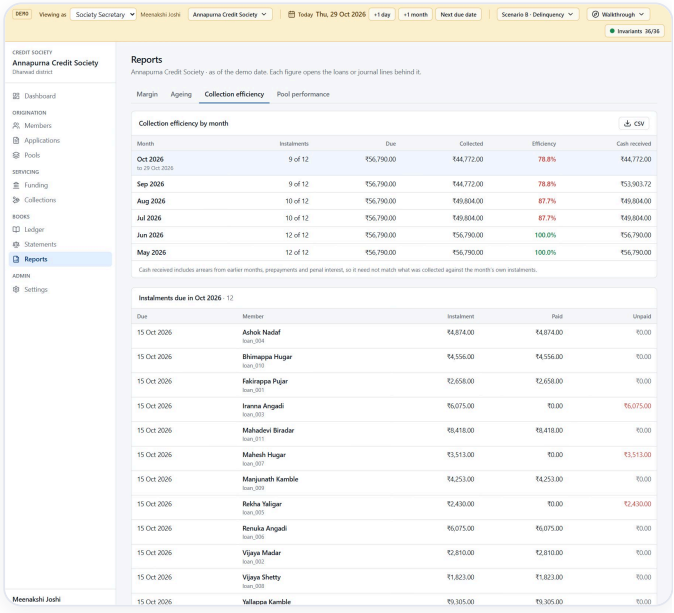

Month	Member interest due	Received	Wholesale on schedule	Paid	Theoretical	Realised	Difference	Why
Oct 2026	₹6,472.51	₹6,472.51	₹5,346.87	₹5,346.86	₹1,125.64	**₹1,125.65**	₹0.01	Rounding
Sep 2026	₹7,070.59	₹7,070.59	₹5,840.92	₹6,330.29	₹1,229.67	**₹740.30**	-₹489.37	Extra wholesale interest
Aug 2026	₹7,662.98	₹7,662.98	₹6,330.29	₹6,330.29	₹1,332.69	**₹1,332.69**	₹0.00	On schedule
Jul 2026	₹8,249.76	₹8,249.76	₹6,815.01	₹6,815.02	₹1,434.75	**₹1,434.74**	-₹0.01	Rounding
Jun 2026	₹8,830.97	₹8,830.97	₹7,295.12	₹7,295.14	₹1,535.85	**₹1,535.83**	-₹0.02	Rounding
May 2026	₹9,406.65	₹9,406.65	₹7,770.70	₹7,770.70	₹1,635.95	**₹1,635.95**	₹0.00	On schedule
Apr 2026	₹9,976.86	₹9,976.86	₹8,241.76	₹8,241.75	₹1,735.10	**₹1,735.11**	₹0.01	Rounding
Mar 2026	₹10,541.65	₹10,541.65	₹8,708.35	₹8,708.33	₹1,833.30	**₹1,833.32**	₹0.02	Rounding

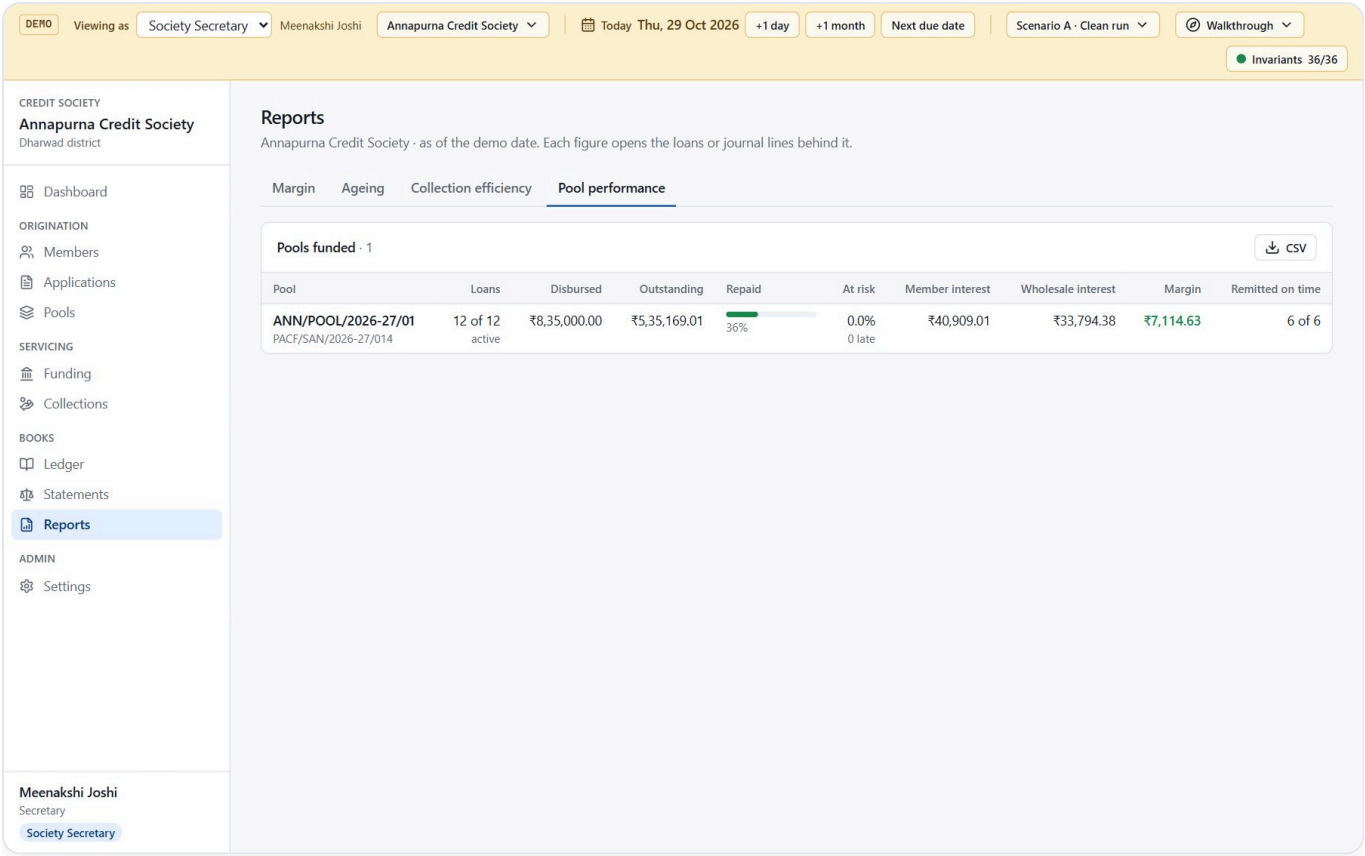

Scenario B, Gramodaya: August's principal held back; September shows extra wholesale interest, lost for good.

Ageing, scenario B: one loan over 90 days, two at 31–60.

Collection efficiency, scenario B: 78.8% in October.

Pool performance, scenario A.

X1 Settings

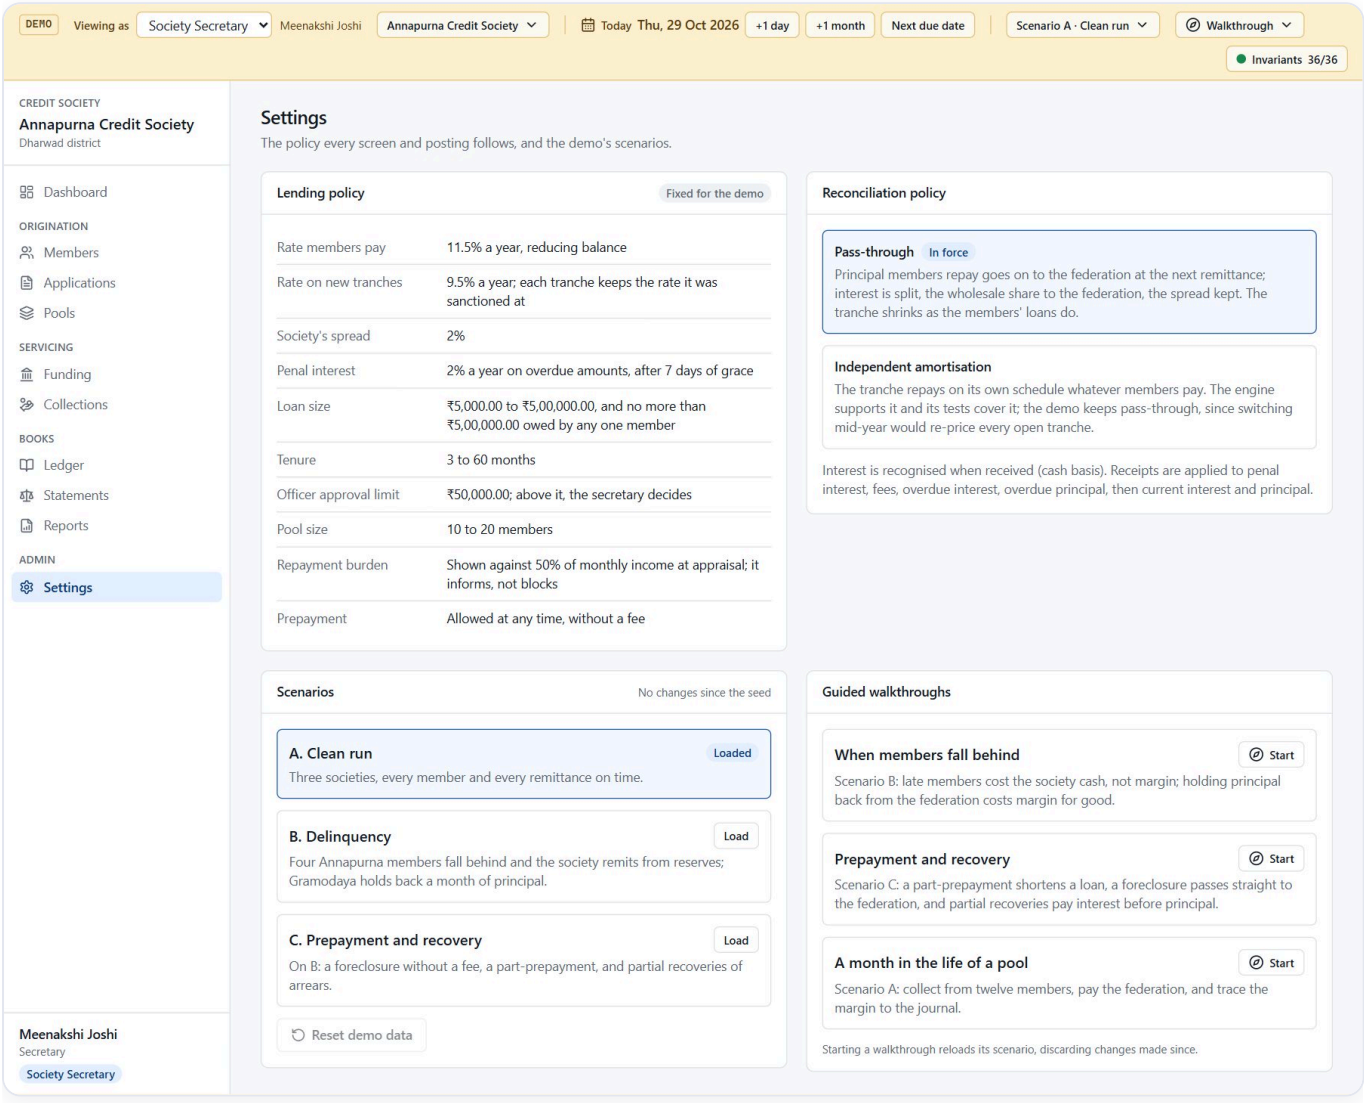

Redesign

Admin › Settings · `/settings` · Secretary, Loan Officer, Auditor

The lending policy, shown and not edited (rates, spread, penal interest, loan size and limit per member, tenure, officer limit, pool size, the 50% repayment burden, prepayment without a fee); the reconciliation policy in force (pass-through) and the alternative; the scenarios with Load and Reset demo data (each confirmed); and the guided walkthroughs.

DESIGN

- Policy reads as a reference card. Mark it clearly as fixed for the demo.

Settings in scenario A.

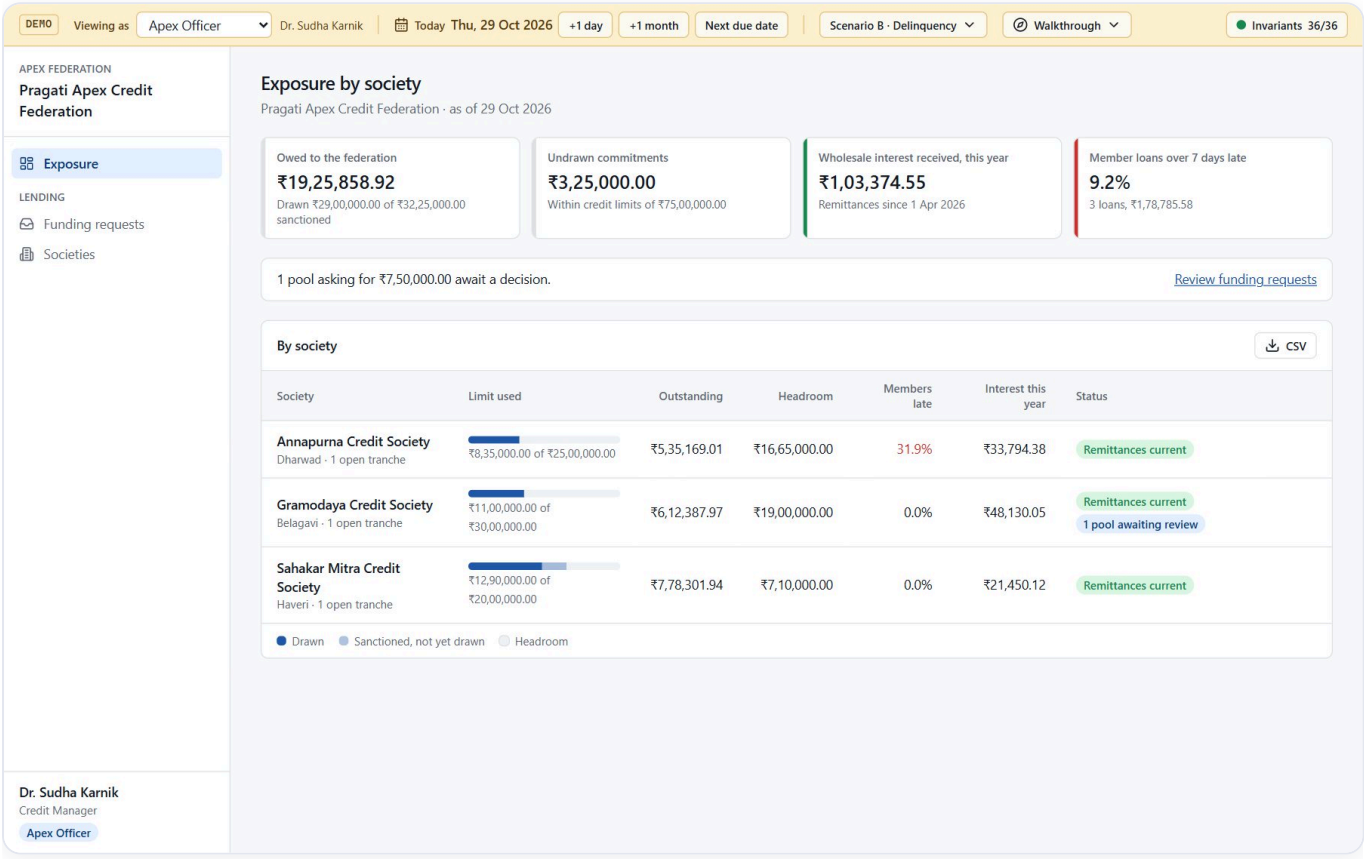

E1 Federation exposure

Redesign

Exposure · `/apex` · Apex Officer · the federation's home page

Four totals (owed to the federation, undrawn commitments, wholesale interest received this year, member loans over 7 days late), a link to pools awaiting a decision, and a row per society: limit used (drawn, sanctioned not drawn, headroom), outstanding, headroom, members late, interest this year, and status pills (remittances current or overdue, pools awaiting review). CSV.

> **DESIGN**
>
> - The federation's risk view: limit used against members late against punctuality, per society, readable at a glance.

Scenario B: Annapurna's members are late, but its remittances are current; one pool awaits review.

E2 Funding requests

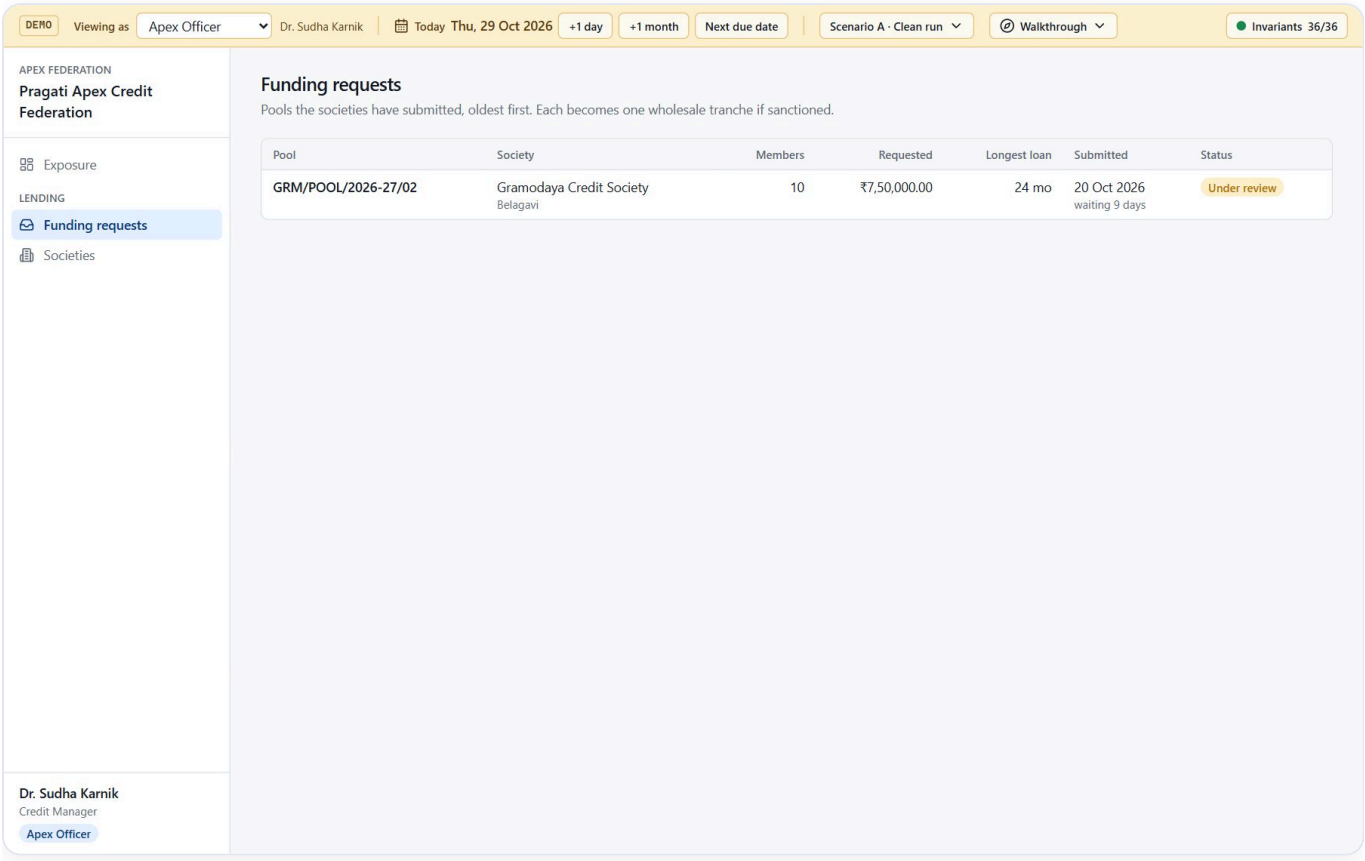

Redesign

Lending › Funding requests · `/apex/requests` · Apex Officer

Pools submitted by societies, oldest first: reference, society, members, requested, longest loan, submitted (with days waiting, red after 14) and status (Submitted, Under review).

DESIGN

- A queue that shows age and urgency.

One request under review, waiting 9 days.

E3 Review and sanction

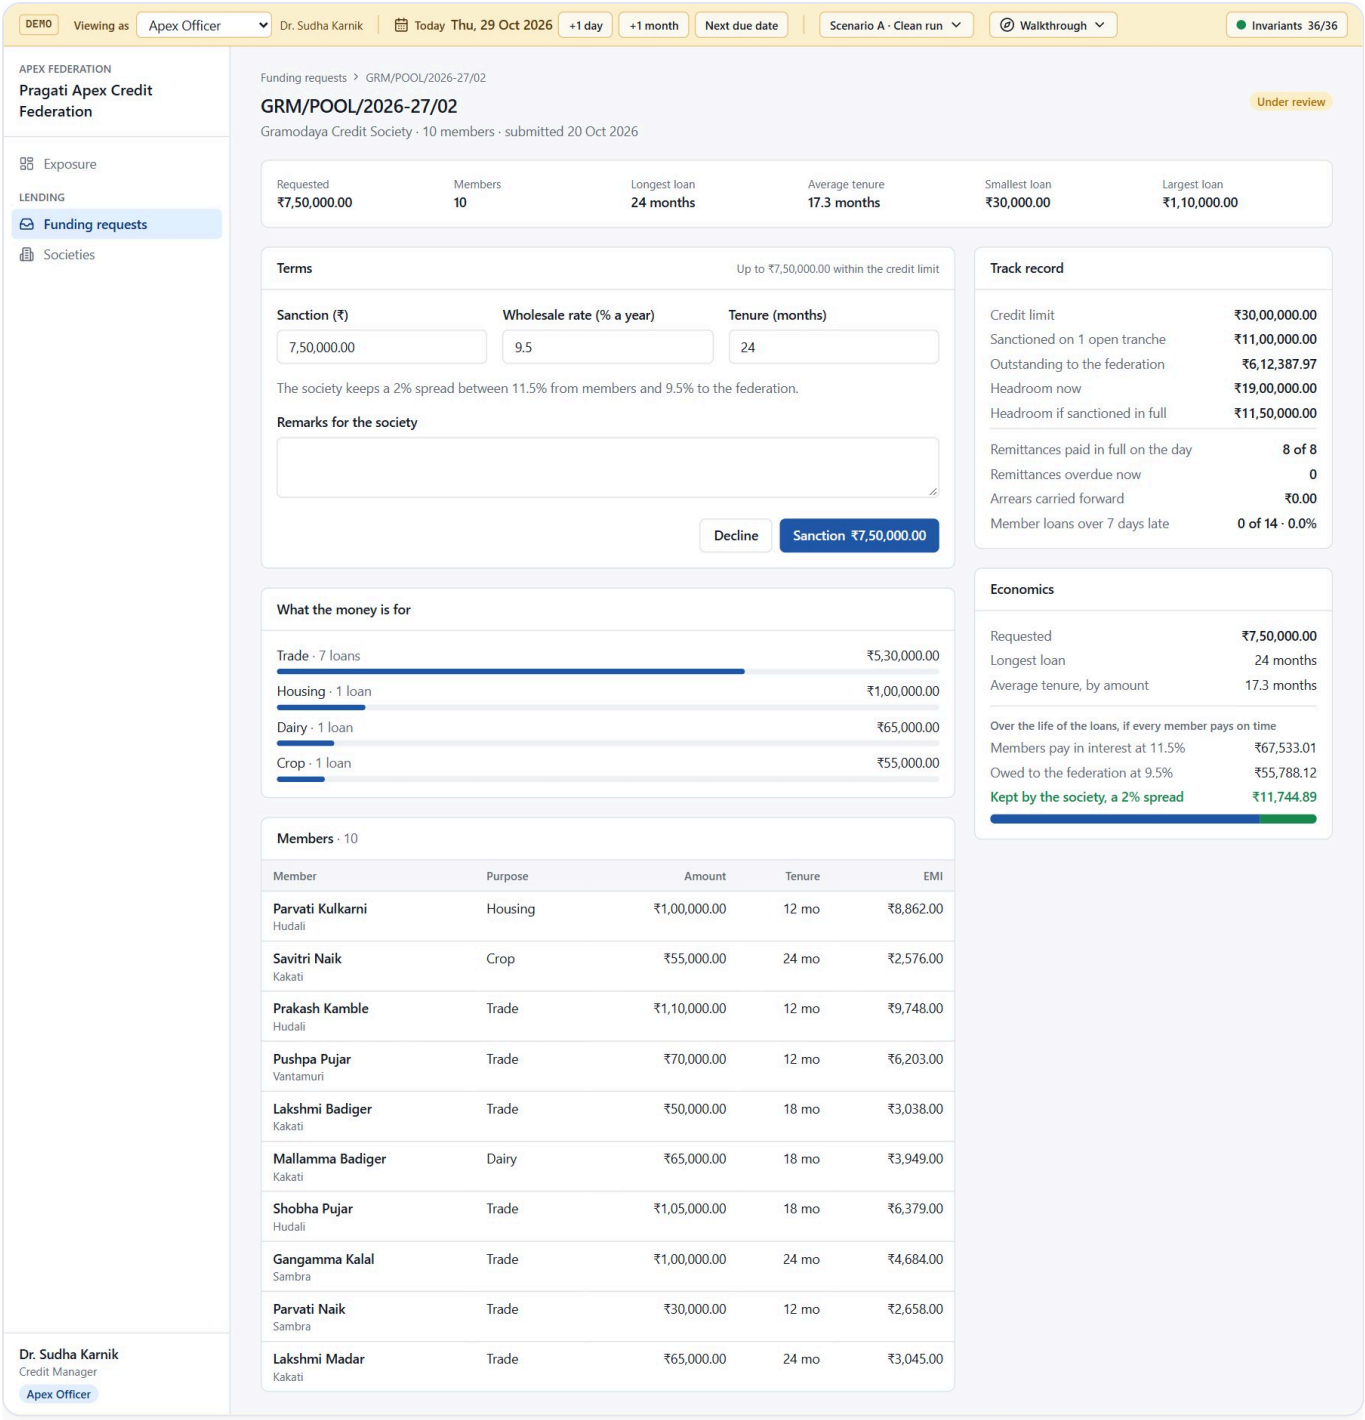

Redesign

Funding requests › a pool · `/apex/requests/:id` · Apex Officer

FLOW Submitted → Begin review → Terms: sanction (amount up to the request and the credit limit, wholesale rate, tenure at least the longest loan, remarks) or Decline (remarks) → the society re-scopes if short

Request facts (requested, members, longest loan, average tenure, smallest and largest loan), the terms editor, what the money is for (by purpose), the members, the society's track record (credit limit, sanctioned, outstanding, headroom now and if sanctioned in full, remittances on the day, overdue, arrears, members late) and the pool's economics.

> **DESIGN**
>
> - A decision page: the terms and the evidence side by side. What must the officer see before sanctioning?
> - Sanctioning short is common. Make the consequence ("the society will re-scope") visible in the terms editor.

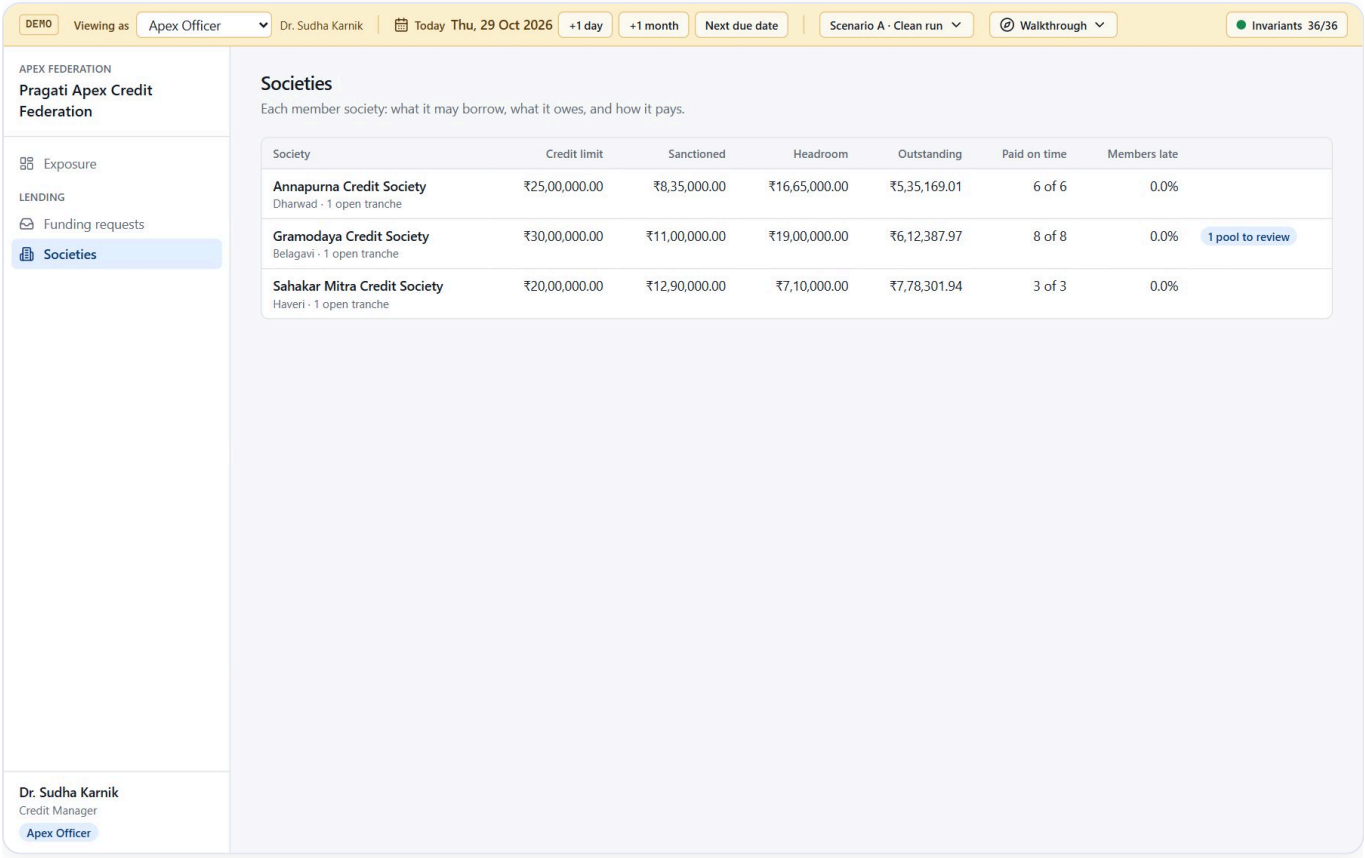

GRM/POOL/2026-27/02 under review: up to ₹7,50,000 within the credit limit.

E4 Societies

Redesign

Lending › Societies · `/apex/societies` · Apex Officer

Each society: credit limit, sanctioned, headroom, outstanding, remittances paid on time, members late, and pills for remittances overdue and pools to review.

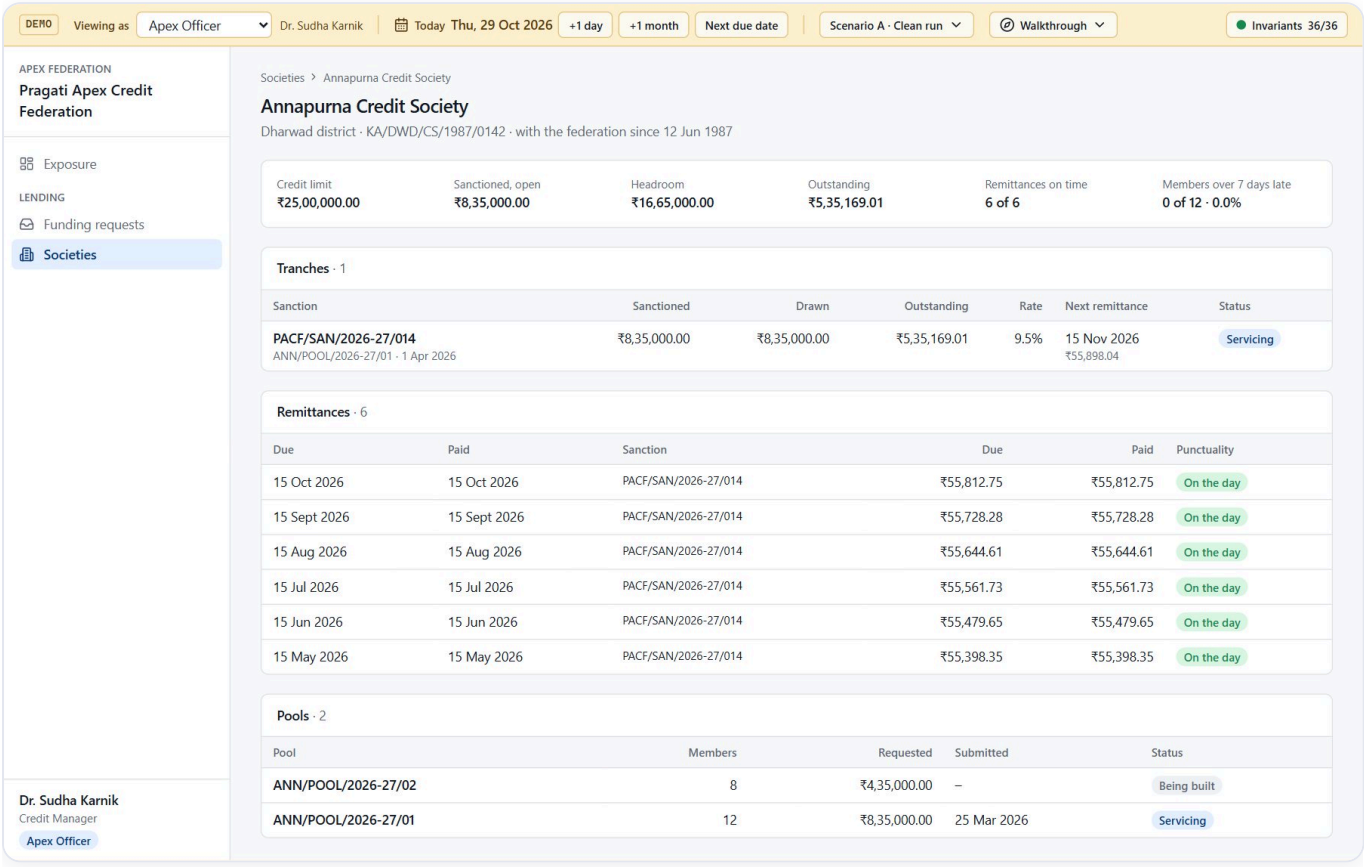

Three societies, scenario A.

E5 Society detail

Redesign

Societies › a society · `/apex/societies/:id` · Apex Officer

Facts, the society's tranches with next remittance, every remittance with its punctuality (on the day, days late, short), and its pools.

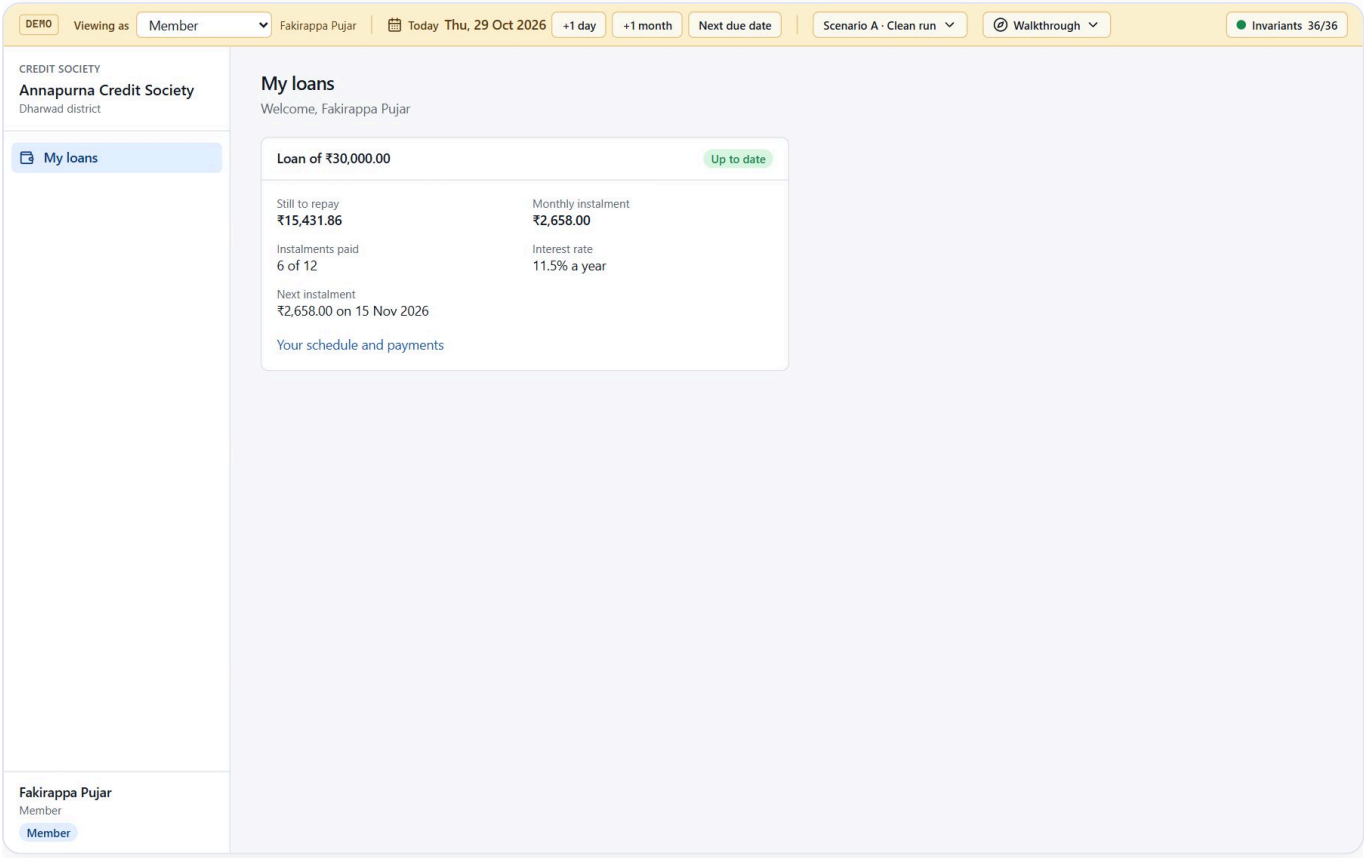

Annapurna: six remittances, all on the day.

U1 My loans (member)

Redesign

My loans · `/me` · Member

What the member owes, what they have paid, and their next instalment, per loan, at the retail rate only. Nothing about the federation, wholesale pricing or margin.

Fakirappa Pujar's loan: 6 of 12 instalments paid.

U2 My loan (member)

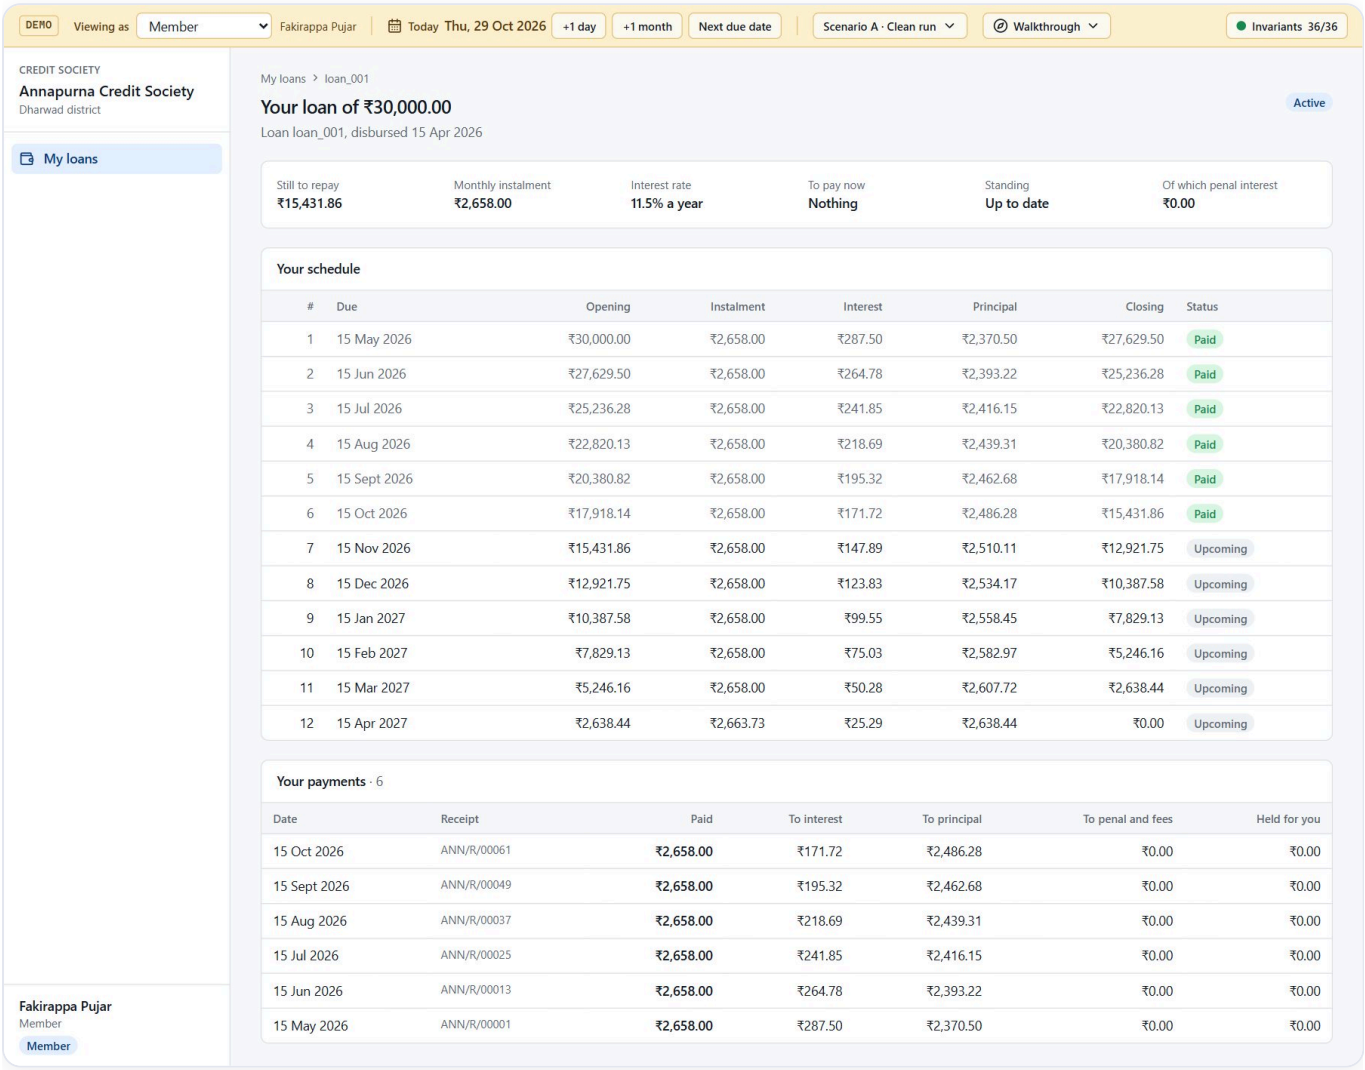

Redesign

My loans › a loan · `/me/loans/:id` · Member

The schedule and every payment with how it was applied, in plain words for a member.

DESIGN

- The member view is for borrowers, many on phones and some new to digital money. Warmer, simpler, larger, with the next instalment first (see Q2).

Your schedule and your payments.

Questions for the whole app

Q1 Table density

Question

Most screens are tables of 5 to 10 columns, with two lines in the first cell (name and an id or place). Staff read them all day. Compact rows (as now, about 40px) or comfortable (52px)? A density switch? Sticky headers for long tables (schedules, journal)?

Q2 Phone

Question

Society and federation screens are designed for desktop and must work at tablet width. The member screens (U1, U2) will mostly be seen on phones once a member portal exists, an open question in the technical design. Should they get a phone layout now?

Q3 Languages

Question

Every label is English today. The societies are in Karnataka, so Kannada will follow, and Kannada labels run 30–50% longer. Should buttons, tabs and tile labels be designed with that room now?

Not a design question: noticed while preparing this brief

- Internal ids (`loan_001` , `app_070`) appear to staff beside names. See F3 for whether to keep them.
- The demo bar wraps to two rows at 1440px since the society switcher and walkthrough menu were added (S2).
- Forms use native selects for member, tenure, purpose, mode and filters (F1).
- CSV downloads are built but not styled beyond an outline button.

Source: tiered-microfinance-prototype, local build after Phase 6, 29/10/2026; 338 tests passing. Technical design document: https://claude.ai/artifact/Bhzryr1KS5wbjx8ZCn7E4B. Screenshots: `docs/design-brief/screens/` , 47 images at 1440 × 900 (desktop) and 768 × 1024 (tablet), device scale 1.25.
